
CSS 105 – Project #4 Report

**Animation and
Movements with Constraints**

Group Members:
Kelvin Sung & Kelvin Sung
Date: xx yy, zz

The purpose of this report is for you to tell me what I should pay attention to. You should show me some images from your animation, and point out what are the elements that are animated to satisfy the requirements of the project specification. You should include images from both the DirectorView and from the ShotCamera.

Image pairs: In the following I use two sets of two images from the final rendering, one set of images from the middle of the animation, the second set from almost the end. These two-image-set help illustrate how some of the elements are animated.

Important Notice: As always my solution may *not* meet all the technical requirements of this project. This merely demonstrates to you what I am looking for. You should make sure your project satisfies all the technical requirements in the project spec!
!!HAVE FUN ANIMATING!!
