Lab Assignment #3

Due Monday, 10/19/09

Please answer the following in **one** page. These questions refer to the entire Meadowbrook Pond site.

1. Identify several roles or functions provided by Meadowbrook Pond. Based on what you've seen, how do you think the restoration team prioritized these functions when designing the restoration? How might Meadowbrook Pond look or function differently if these functions were weighted differently?
2. Do you consider this an example of restoration? Why or why not? For example, is it too dependent upon engineered elements?
