Pharm 439: Community Service Outreach
Journal Analysis I

This assignment asks you to do two things. First, categorize your data according to whether it is first, second, or third person research. Use a photocopied page from your journal and underline the example you are presenting. In the LEFT margin indicate whether the example is #1, #2, or #3 person research. If there is only one type of research on a page, photocopy another page to demonstrate one other type of 1, 2, or 3rd person research. In summary, you must have 2 types of research identified.

Second, refer to handout you received the first day of class. Slide 4 defines what qualitative researchers do. Slide 5 lists approaches to data. In the RIGHT hand margin note the type of data you are using (e.g., interview, observation, artifacts, etc.) and circle your evidence.
