

DDP/ Spring 09/ Chalana/Assignment 4/ 10 points

Due: May 13

As a consultant for the **Pike/Pine Urban Neighborhood Council (PPUNC)** you have been asked to make a three dimensional “block” model for the Pike Pine Urban Village.

Your model should emphasize the building forms and the terrain primarily. Also device a way to highlight your blocks (from the GIS assignment) in the model to make them prominent.

In addition use assessors data for your blocks (from Assignment 3), and select any one or more of the following attributes (year built; stories; construction class; building quality; predominant use; or gross square feet) to create three dimensional maps that best represent those data.

Situate the block model on Google Earth. Present your graphics using one 11X17” sheet. Use title bar with north arrow and scale.
