Textbook Problems:

3.19 (need to use Algorithm 3.4/p. 604), 6.25, 6.26, 6.27, 4.1, 4.2, 4.5

I suggest that you include all matlab scripts in the back of the book in your Matlab directory-- there are dependencies between different m-files. No need to type in each routine- just check the class website/copy and past the scripts. I am assigning less homework this week, so that you spend some time getting familiar with all the Matlab routines in the back of the book and run them --- you should get to know what each routine is useful for. These scripts will become handy for your project, so please start using them.
