CSS 343  Data Structures, Algorithms, and Discrete Math II      Spring 2015
http://courses.washington.edu/css343/zander

Professor:  Dr. Carol Zander (zander@u.washington.edu)  Office Hours:  M, W  5:30-6:30pm
             Office: UW1-353                           or by appointment
             Phone: (425) 352-5276

Course description:
This sequenced course integrates mathematical principles with detailed instruction in computer
programming. Topics include development of algorithms; algorithm analysis; object-oriented
programming; abstract data types including trees, priority queues, graphs, and tables; regular expressions
and context-free grammars. Prerequisites: CSS 342 with a grade of 2.0 or better.

Grading:  Assignments  35%  Assignments consist of problems and programs.
          Midterm exam  30%  A scale of 90s (3.5-4.0), 80s (2.7-3.4), 70s (1.8-2.6),
          Final exam  35%  60s (0.7-1.7) is approximately used.

Textbooks:  (1).  Data Abstraction and Problem Solving With C++, Frank M. Carrano, Addison-Wesley
             (2).  Discrete Mathematics and Its Applications, Kenneth Rosen, Addison-Wesley (optional)

Policies:
Work is to be done independently unless directed otherwise; collaboration of work is NOT acceptable. You
may discuss the problem statement with each other and help debug, but all designing and coding is to be
done independently. Any pair programming must be approved by me. This class is run by honor code. By
taking this class, you agree that you will not collaborate inappropriately on any work. In some cultures,
family relationships and their loyalty are considered above all others. In this course, we are an academic
family and you betray the instructor's and the university's trust should you violate the honor code. This
violation will be taken seriously. (See  http://www.uwb.edu/academic/policies/Academic_Conduct.xhtml )

Pay attention to the catalyst due date. And recall catalyst can be slow, so don't wait for the last minute.
Assignments will only be accepted via catalyst. Unless we have spoken about the circumstances and prior
arrangements have been made, an assignment not turned in receives a grade of zero. Assignments will have a
due time. If you turn in an assignment a few minutes after the due time, it will not be considered late. Catalyst
will be open for an extra hour. Assignments turned in during that time lose 10%. If you email asking me to
please not mark it late, you lose 20%.

No make-up exams will be given except under exceptional circumstances.

Computer use during lecture is limited to taking notes. No social networks, email, games, etc. You are not
allowed to display any images on your screen during lecture as it is distracting. No cell phones. And keep
whispering to a minimum so as not to distract others.

Because of limited time, all assignment questions will be answered on the message board. Implementation
questions about your program should come to me in email. Also, there will be no debugging of code during
class break. You can ask questions, but without your computer.

To request academic accommodations due to a disability, please contact Disability Resources (DRS) at
425.352.5307, 425.352.5303 TDD, or drs@uwb.edu. Provide documentation by the third week of the quarter.

Course goals:
Refining and extending the concepts and skills introduced in CSS342, students develop competencies
associated with problem-solving, design, testing, and programming techniques. Topics include ADTs, data
structures, related algorithms, and object-oriented design & programming. Formal automata theory as it
applies to programming languages is introduced. Good software engineering and algorithm analysis
techniques are used throughout. As with most technical courses, besides ability and motivation, it takes time
to learn and master the subject. Expect to spend an average of 15 hours a week outside of class time for this
course; some of you may spend more, some less time.
Assignments:
- Follow all directions for turn-in on an assignment (found on course website, assignment's page).
  Turn in via catalyst dropbox linked from the course website.
- Your code must compile and run properly using the unix/linux g++ compiler.
- Syntax errors and run-time errors with not much output yield a low grade. Run-time errors or
  incorrect answers will result in a significant number of points being deducted from your grade.

If your code does not compile, run, and give CORRECT output for the sample main given, the
highest grade you will receive on the assignment is D+ and the program will receive little feedback.
If you do not put in the time to write it, time will not be put in to give you feedback about it.
Otherwise, you will be graded on documentation (clarity and completeness), style (indentation and use
of blank lines/spaces), meaningful identifier names, organization of your program (modularity/design),
efficiency (no useless, unnecessary, or unnecessarily complicated code), output (clarity and format),
the overall readability, and following directions. Coding / documentation style guidelines and a detailed
grading rubric can be found linked off the course website.

Topics covered and tentative 343 schedule:
This is an approximate ordering of topics. Some content will take more time, some less. Also, not all
sections in all chapters will be covered; use topics as a guide. (Readings are labeled C++ or Math (Rosen),
corresponding to the two texts.) Although the C++ Interludes contain valuable content, they are not listed.
