Chapter 1 – Introduction to AutoCAD

Launching AutoCAD ................................................................. 4
Text and Graphics Screens .................................................... 5
Cursor ..................................................................................... 6
Canceling a Command ............................................................ 6
Menus and Colors ....................................................................... 7
   Pulldown Menus ................................................................. 7
   Cascading Pulldown Menus .................................................. 7
Toolbars .................................................................................... 8
   To Float a Toolbar: ............................................................. 8
   To Dock a Toolbar: ............................................................ 8
Help Tooltips ............................................................................. 9
Loading Toolbars ...................................................................... 9
Filedia ..................................................................................... 10
Status Bar ................................................................................ 11
Pointing Device (Mouse) ........................................................ 12
   Left Mouse Button .......................................................... 12
   Right Mouse Button ........................................................ 12
Command Prompt .................................................................... 13
   Typing a Command .......................................................... 13
   Reissuing the Last Command .............................................. 14
Undo ....................................................................................... 15
Redo ....................................................................................... 15
Function Keys .......................................................................... 16
Accelerator Keys ..................................................................... 17
On-Line Help ............................................................................ 18

Chapter 2 – Introduction to Commands

Opening a Drawing ................................................................. 20
New Drawings ......................................................................... 21
   NEW Command ............................................................... 21
Saving Drawings .................................................................... 21
   SAVE and SAVEAS ......................................................... 22
   QUICK SAVE .................................................................. 23
File Safety Precautions .......................................................... 24
   Autosave ......................................................................... 24
   Temporary Files .............................................................. 24
   Security Options ............................................................. 25
Exiting AutoCAD ................................................................. 26
   QUIT ............................................................................ 26
Chapter 3 – Draw Commands

Line Command ........................................................................................................ 28
Cartesian Coordinate System .............................................................................. 29
  Absolute Coordinates ...................................................................................... 30
  Relative Coordinates ...................................................................................... 30
  Polar Coordinates ......................................................................................... 30
Orthogonal Lines ................................................................................................. 31
Direct Distance Entry .......................................................................................... 32
Circles and Arcs .................................................................................................. 33
  Circle Command ............................................................................................. 33
  Arc Command .................................................................................................. 34
Command Aliases ................................................................................................. 35
  Line Alias ....................................................................................................... 35
  Circle Alias .................................................................................................... 35
  Arc Alias ....................................................................................................... 35

Chapter 4 – Erase and Selection Sets

Erase and Selection Sets ...................................................................................... 36
  Erasing Objects ............................................................................................... 37
Selection Set Options ........................................................................................... 38
  Window and Crossing ....................................................................................... 38
  Remove from Selection Set ............................................................................ 39
OOPS .................................................................................................................. 40
Delete Key ............................................................................................................ 40

Chapter 5 – Basic Display Commands

Zoom ..................................................................................................................... 41
Pan ......................................................................................................................... 42
Redraw .................................................................................................................. 44
Blipmode ............................................................................................................... 44
Regen ..................................................................................................................... 44

Chapter 6 – Drawing Aids

SNAP Command .................................................................................................. 45
  Turn Snap On/OFF ......................................................................................... 46
SNAP Angle .......................................................................................................... 47
Grid Command ..................................................................................................... 47
  Turn Grid On/Off ........................................................................................... 48
Polar Tracking ...................................................................................................... 49
Chapter 7 – Object Snapping

Running Object Snaps .......................................................................................... 50
Object Snap Settings .......................................................................................... 52
Osnap Settings ..................................................................................................... 54
Aperture ............................................................................................................... 54

Chapter 8 – Setting Up a Drawing

List Command .................................................................................................... 54
Measuring Distances .......................................................................................... 55
ID Command ...................................................................................................... 57
UNITS Command ............................................................................................... 58
Drawing Limits ................................................................................................... 59
Plot Scales and Paper Sizes .............................................................................. 60

Chapter 9 – Plotting

Plot Command .................................................................................................... 62
Plot Settings ....................................................................................................... 65
Adding a Plotter ................................................................................................... 66
Plotter Manager Wizard ..................................................................................... 66
Choosing a Plotter Driver .................................................................................. 67
Importing a .PCP or .PC2 file ............................................................................. 67
Define a Port ........................................................................................................ 68
Saving a Plot Configuration Name ..................................................................... 68
Plot Styles .......................................................................................................... 69
Add a Plot Style .................................................................................................. 69
Named Plot Styles ............................................................................................... 72

Chapter 10 – Edit Commands

Move Command ................................................................................................. 72
Copy Command ................................................................................................... 75
Previous Selection .............................................................................................. 76
Offset Command ................................................................................................. 77
EXTEND .............................................................................................................. 79
TRIM ..................................................................................................................... 80
Edgemode .......................................................................................................... 81
MIRROR .............................................................................................................. 82
Mirrtext ............................................................................................................. 82
ROTATE .............................................................................................................. 83
Reference Angle Rotation .......................................................................................... 85
SCALE ...................................................................................................................... 86
Scale by Specifying Length ..................................................................................... 87

Chapter 11 – Text

Text Command ....................................................................................................... 87
Text Justification .................................................................................................... 90
Style Command ..................................................................................................... 92
Font Files .............................................................................................................. 93
Multiline Text ......................................................................................................... 94
Mtext Command ................................................................................................... 94
Type text or change an MTEXT setting. ................................................................. 94
MTEXT options: .................................................................................................... 95
Editing Text ........................................................................................................... 96
DDEdit .................................................................................................................. 96
Special Control Codes .......................................................................................... 97
Spell Check ............................................................................................................ 98
Scale Text ............................................................................................................. 99

Chapter 12 – Layers, Linetypes, and Colors

Introduction to Layers and Layer Dialog Box ..................................................... 100
Changing the Layer of an Object ........................................................................ 103
Making a Layer Current ...................................................................................... 103
Layer Previous ..................................................................................................... 104
Layer States ......................................................................................................... 106
Color Command .................................................................................................. 106
Loading and Changing Linetypes ....................................................................... 108
Lineweights .......................................................................................................... 109
Loading and Changing Lineweights ................................................................. 109
Object Properties ............................................................................................... 110

Chapter 13 – More Edit Commands

Stretch ............................................................................................................... 114
Fillet .................................................................................................................... 116
Chamfer ............................................................................................................. 117
Array .................................................................................................................. 118
Rectangular Array .............................................................................................. 118
Polar Array ........................................................................................................ 119
Lengthen .......................................................................................................... 121
Chapter 14 – Advanced Display Commands

Transparent Commands ................................................................. 123
Multiple Command ........................................................................ 124
Calculator (CAL Command) ......................................................... 125

Chapter 15 – Polylines

PLINE options: ............................................................................... 129
Editing Polylines ........................................................................... 130
  Edit Vertex Options ................................................................ 131
Editing Multiple Polylines .......................................................... 132
Explode Command ....................................................................... 133
Turning Lines into Polylines ........................................................ 134

Chapter 16 - More Draw Commands

Polygon ........................................................................................ 136
Rectangle ...................................................................................... 137
Spline ............................................................................................ 138
  Spline options: ....................................................................... 139
EDIT Spline .................................................................................. 140
Covert PLINE to Spline ............................................................... 141
Donut ........................................................................................... 142
Ellipse ........................................................................................... 143
Multilines ...................................................................................... 145
  MLINE Command ................................................................. 145
  Multiline Justifications ............................................................ 146
Multiline Styles ............................................................................ 147
Editing Multilines ....................................................................... 148
Construction Line ........................................................................ 149
Ray Command ............................................................................. 150

Chapter 17 - Crosshatching

BHATCH Command ....................................................................... 152
  BHATCH options: .................................................................... 153
Advanced Hatch Options ............................................................. 154
  Define Boundary Set ............................................................... 154
  Hatchstyle ............................................................................. 154
  Boundary Options ................................................................. 154
Gradient Hatch ............................................................................ 155
HATCHEDIT ................................................................................ 156
Inherit Hatch .............................................................................. 157
Chapter 23 - Advanced Selection Commands

Selection Modes ........................................................................................................... 194
  Noun/Verb Selection ......................................................................................... 194
  Use Shift to Add to Selection ................................................................. 194
  Press and Drag ............................................................................................. 194
  Implied Windowing ..................................................................................... 195
  Object Grouping ......................................................................................... 195
  Associative Hatch ....................................................................................... 195
Groups ................................................................................................................. 196
Object Selection Cycling .................................................................................... 197
Draw Order ........................................................................................................... 199
Object Filters ..................................................................................................... 200
Quick Select ....................................................................................................... 201
Layer Filters ...................................................................................................... 202
Point Filters ....................................................................................................... 203

Chapter 24 - External References

External Reference Files Overview ........................................................................ 205
  The following are Xref characteristics ....................................................... 205
Attaching Xrefs ................................................................................................. 207
Xref Layers ........................................................................................................... 208
  Layer Dialog Box ......................................................................................... 208
Xclip .................................................................................................................... 209
Xclipframe .......................................................................................................... 210
Binding an Xref ................................................................................................. 211
  To Bind an Xref .......................................................................................... 211
Xbind .................................................................................................................... 212
Editing Xrefs (Xref Manager) ........................................................................... 213
  Detaching Xrefs ......................................................................................... 213
  Unload an Xref ........................................................................................... 213
  Reload an Xref ......................................................................................... 214
  Opening Xrefs to Edit .................................................................................. 214
Overlay an Xref ................................................................................................. 215

Chapter 25 - Raster Images

Inserting Images .................................................................................................... 217
Image Appearance 25.2 ....................................................................................... 219
  Adjusting Image Appearance ....................................................................... 219
  Image Transparency ..................................................................................... 219
Erasing Images .................................................................................................... 220
Image Quality ..................................................................................................... 220
Chapter 26- Dimensions

Linear Dimensions ........................................................................................................ 222
Aligned Dimensions .................................................................................................... 224
Radial Dimensions ..................................................................................................... 225
Angular Dimensions ................................................................................................... 225
Continued and Baseline Dimensions .......................................................................... 226
Leaders ...................................................................................................................... 227
   Leader Settings ....................................................................................................... 228
Quick Dimensions ..................................................................................................... 229
Modifying Dimensions ............................................................................................... 230
   DDEdit ................................................................................................................... 230
   Stretching Dimensions ......................................................................................... 230
   DIMTEDIT ............................................................................................................. 231
   Dimension Edit Commands ................................................................................. 231
Ordinate Dimensions ................................................................................................. 232

Chapter 27- Dimension Styles

Creating Dimension Styles ........................................................................................ 234
Lines and Arrows ....................................................................................................... 235
Text ............................................................................................................................. 236
Primary Units ............................................................................................................. 237
Alternate Units ........................................................................................................... 238
Tolerances .................................................................................................................. 239
Fit ............................................................................................................................... 240
Dimscale .................................................................................................................... 240
Dimension Override .................................................................................................. 242
Dimension Variables ................................................................................................. 243

Chapter 28 – Views and Viewports

Named Views ............................................................................................................. 246
   Ddview Command .................................................................................................. 247
   Typing the View Command .................................................................................... 248
   View options: ......................................................................................................... 248
   Plotting Named Views .......................................................................................... 248
Viewports .................................................................................................................... 249
   Vports Command .................................................................................................. 249
   Viewport options ................................................................................................. 250
## Chapter 29 - Model Space and Paper Space

Chapter 33 - OLE and External Applications

Copying from AutoCAD ................................................................. 285
Print Screen .................................................................................. 286
OLE Linking to AutoCAD ............................................................... 287
Hyperlinking .................................................................................. 289
Opening a Hyperlink ..................................................................... 289

Chapter 34 - Communication and Collaboration Tools

Plotting to the WEB ....................................................................... 292
Configuring DWF Files ................................................................. 293
Publish Command ......................................................................... 294
Publishing WEB Pages ................................................................. 295
e-Transmit ...................................................................................... 300
i-Drop ............................................................................................... 301

Chapter 35 - AutoCAD WEB

AutoCAD DWF Viewer ................................................................. 303
Volo View ....................................................................................... 304
CAD Viewer .................................................................................... 305
Internet Explorer ............................................................................ 306
AutoCAD Related WEB Sites ....................................................... 307

Chapter 36 - Customization

Create New Toolbars ..................................................................... 312
Pausing for User Input Example .................................................... 317
AutoLISP Web Sites ....................................................................... 322

Chapter 37 - External Applications and LISP Routines

Loading LISP Files ......................................................................... 323
Loading Menus with LISP Routines ............................................... 324
Chapter 38 - Slide Shows

MSlide Command ................................................................. 326
Scripts....................................................................................... 328
Pausing a Slide........................................................................ 328
Running a Script in AutoCAD....................................................... 329
Repeating a Script................................................................... 329

Chapter 39 - CAD Standards

Redline Markup Language .......................................................... 335
Revision Cloud........................................................................ 337
Wipeout.................................................................................... 338

Chapter 40 - Isometrics

Isometric Cursor ........................................................................ 339
Isoplane Toggle........................................................................ 341
Isometric Circles..................................................................... 342
Isometric Text.......................................................................... 343
Isometric Dimensions............................................................... 345
Chapter 1
Introduction to AutoCAD
1.1 Launching AutoCAD

1. **Choose** Start from the Windows program manager.
2. **Choose** Programs, Autodesk, AutoCAD 2004.
3. **Click** the AutoCAD 2004 for Windows icon.

   ![AutoCAD 2004 for Windows Icon]

   **or**

4. **Choose** the AutoCAD 2004 icon from the desktop.

   ![AutoCAD 2004 Icon on Desktop]
1.2 Text and Graphics Screens

The graphics screen and the text screen are two different screens available in the drawing editor.

1. **Press** Function key F2 on the keyboard.

**TIPS:**

- Be sure the Model Tab is highlighted at the bottom of the drawing window. “Layouts” will be covered in a later session.
- The Cursor must be in the drawing window in order to select objects.
- Maximize the AutoCAD windows to be full screen. This will make the drawings bigger and easier to read.
- Use ALT + TAB to move between Windows applications.
1.3 Cursor

Controls the size of the crosshair. The allowable range is from 1 to 100 percent of the total screen. At 100% the ends of the crosshair are never visible. When the size is decreased to 99% or below, the crosshairs have a finite size, and the crosshairs’ ends are visible when moved to the edge of the graphics area. The default size is 5%.

1. **Choose** Tools, Options…
2. **Click** the Display TAB.
3. **Drag** the slider bar in the lower left corner of the dialog to set the cursor size.

1.4 Canceling a Command

1. Press the **ESCAPE (ESC)** key on the keyboard.

**TIP:** Pressing ESC twice clears nested commands.
1.5 Menus and Colors

Pulldown Menus

1. Click On the desired Pulldown menu.
2. Click On the command to be executed from the pulldown.

Cascading Pulldown Menus

1. Click On a command that has a cascading menu (menus with an arrow to the right of the menu)
2. Click On the command to be executed.
1.6 Toolbars

Toolbars can be docked on the screen or they can float about the screen.

To Float a Toolbar:

1. Choose the gray border surrounding each tool.
2. Drag the toolbar to any area on the screen.

To Dock a Toolbar:

1. Choose the title or gray border of the toolbar.
2. Drag the toolbar to the top, bottom, left, or right area of the graphics display.

TIPS:

- Holding the CTRL key while dragging will prevent docking.
- Toolbars are often a faster way of accessing a command.
- Clicking on an icon with the right mouse button will show a list of all available toolbars.
Help Tooltips

1. **Move**
   
   The mouse to the toolbar but do not pick the button.

Loading Toolbars

1. **Choose**
   
   View, Toolbar...

   or

2. **Type**
   
   TOOLBAR at the command prompt

   Command: **TOOLBAR**

3. **Choose**
   
   the desired toolbar to load.
1.7 Filedia

Some commands evoke dialog boxes which are typically used to enter information or change settings. The filedia command suppresses display of the file dialog boxes.

1. **Type** FILEDIA at the command prompt.
   
   Command: `filedia`

2. **Enter** new value for FILEDIA <1>: 0

   0 Dialog boxes are not displayed. You can still request a file dialog box to appear by entering a tilde (~) in response to the command’s prompt.

   1  Turns on dialog boxes.

   0  Turns off dialog boxes.

**TIPS:**

- Menu choices that are followed by three dots (... ) typically invoke a dialog box. For example `View, Toolbars...` calls a dialogue box.

- To use the command line version of a dialog box command, enter minus (-) in front of the command.
1.8 Status Bar

The Status Bar is the area below the command line that shows messages as well as coordinates, modes, and the current time.

To activate SNAP, GRID, ORTHO, OSNAP, MSPACE, PSPACE, and TILE, you must double-click on the mode to change.

TIP:

• Right click on the status bar to see the options.
1.9 Pointing Device (Mouse)

AutoCAD uses either a mouse or digitizing tablet to select objects in a drawing.

Left Mouse Button

Used to pick or select objects

1. **Click** the left mouse button to select an object area in the drawing.

2. **Press** ESC twice to deselect an object (or to cancel a command).

Right Mouse Button

Used to enter a command, repeat last command, or access shortcut menus.

1. **Click** the right mouse button.

TIPS:

- SHIFT + the right mouse button brings up the object snap menus.
- Various screen locations for the mouse brings up different menus.
1.10 Command Prompt

Typing a Command

All AutoCAD commands can be typed in at the command line. Many commands also have one or two letter aliases that can also be typed as shortcuts to the commands.

1. **Type** the desired command at the command prompt.
   
   Command: **LINE**

   or

2. **Type** the command's alias.
   
   Command: **L**

3. **Press** **ENTER**.

4. **Type** an option at the command prompt.

**TIP:**

Many AutoCAD commands require you to press ENTER to complete the command. You know you are no longer in an AutoCAD command when you see a blank command line.
Reissuing the Last Command

The last used AutoCAD command can be re-entered by one of the following three methods of ENTER. The ENTER key on the keyboard will always act as ENTER, the SPACEBAR and RIGHT MOUSE will act as enter most of the time (exceptions include placing TEXT).

1. **Press** the ENTER key on the keyboard  
   or  
2. **Press** the Space bar on the keyboard.  
   or  
3. **Click** the right mouse button.
1.11 Undo

Reverses the last action.

1. Choose Edit, Undo.
   or
2. Click the Undo icon.
   or
3. Press CTRL + Z.
4. Type U at the command prompt to undo the last command.
   Command: U

Redo

Reverses the effects of a single UNDO or U command.

1. Choose Edit, Redo.
   or
2. Click the Redo icon.
   or
3. Type REDO at the command prompt to redo the last undo command.
   Command: REDO

TIPS:

- UNDO has no effect on some commands and system variables, including those that open, close, or save a window or a drawing, display information, change the graphics display, regenerate the drawing, or export the drawing in a different format.

- REDO must immediately follow the U or UNDO command.
1.12 Function Keys

Keyboard shortcuts predefined in AutoCAD

F1  Online Help
F2  Flipscreen
F3  Osnap ON/OFF
F4  Tablet On/Off
F5  Isoplane Toggle
F6  Coords On/Off
F7  Grid On/Off
F8  Ortho On/Off
F9  Snap On/Off
F10 Polar On/Off
F11 Object Snap Tracking ON/OFF
1.13 Accelerator Keys

Press  CTRL + A to turn GROUPS on/off.
Press  CTRL + B to turn SNAP on/off.
Press  CTRL + C to COPYCLIP
Press  CTRL + D to turn COORDS on/off.
Press  CTRL + E to Toggle Isoplane settings.
Press  CTRL + F to turn Osnaps ON/OFF
Press  CTRL + G to turn GRID on/off.
Press  CRTL + K for Hyperlinks
Press  CTRL + L to turn ORTHO ON/OFF
Press  CTRL + N to create a NEW drawing.*
Press  CTRL + O to OPEN an existing drawing.*
Press  CTRL + P to PLOT a drawing.*
Press  CTRL + S to qsave a drawing.*
Press  CTRL + T to turn the digitizing tablet on/off.
Press  CTRL + X to cut to Clipboard.*
Press  CTRL + Z to UNDO

Typical in any Microsoft Windows application.

TIPS:
You can define your own shortcut keys (or accelerator keys). The following is a short example of an Accelerators section in an MNU file.

***ACCELERATORS
ID_Line    [SHIFT+CONTROL+"L"]
[CONTROL+"Q"]^C^C_quit
[CONTROL+SHIFT+"Z"]^C^Czoom extents
1.14 On-Line Help

1. Choose Help, AutoCAD Help.
   or
2. Click the Help icon.
   or
3. Type HELP at the command prompt
   Command: HELP
   or
4. Press Function Key F1
Chapter 2
Introduction to Commands
2.1 Opening a Drawing

1. Choose File, OPEN.
   or
2. Press CTRL + O.
   or
3. Click the OPEN icon.
   or
4. Type OPEN at the command prompt.
   Command: OPEN
5. Press ENTER
6. Double Click the desired directory to find the drawing to open.
7. Click the drawing name to open.
8. Click The OK button.

TIPS:
- Preview shows a bitmap image of the drawing selected. This image is the view that was last saved in the drawing. It will not show a preview of drawings saved before R13 AutoCAD.
2.2 New Drawings

NEW Command

*Creates a new drawing file.*

1. **Choose** File, New.
   
   or
   
2. **Press** CTRL + N
   
   or
   
3. **Click** the New icon.
   
   or
   
4. **Type** NEW at the Command prompt.
   
   Command: **NEW**
   
5. **Choose** One of the options for creating a new drawing.
   
6. **Click** The OK button.
   
7. **Save** the drawing as another name.

**TIP:**

New drawings can also be created from Template Files.
2.3 Saving Drawings

SAVE and SAVEAS

Saves the most recent changes to a drawing. The first time an unnamed drawing is saved the "Save As" dialog box appears. AutoCAD saves its drawings as files with extensions ending in .DWG.

1. **Choose** File, Save or Saveas.
   
or

2. **Type** SAVE or SAVEAS at the command prompt.
   
   **Command:** SAVE or SAVEAS

3. **Press** ENTER

4. **Type** A new drawing name or keep the existing drawing name.

5. **Click** The OK button.

**TIP:**

Clicking the dropdown list for File type changes the format that the drawing can be saved in.
QUICK SAVE

The QSAVE command is equivalent to clicking Save on the File menu.

If the drawing is named, AutoCAD saves the drawing using the file format specified on the Open and Save tab of the Options dialog box and does not request a file name. If the drawing is unnamed, AutoCAD displays the Save Drawing As dialog box (see SAVEAS) and saves the drawing with the file name and format you specify.

1. **Press** CTRL + S. 
   or
2. **Click** the Save icon. 
   or
3. **Type** QSAVE at the command prompt, 
   Command: QSAVE

**TIPS:**
Drawings can be saved as different versions of AutoCAD (e.g. R13, R14, R 2000, etc.)

AutoSave settings under Tools, Options...
2.4 File Safety Precautions

Autosave

AutoCAD automatically saves information in .SV$ files; however, users should save their drawings to .DWG files every 10 minutes. A value of zero (0) disables autosave.

Temporary Files

These files have the extensions .ac$ (temporary drawing file).

After a system failure, if you are on a network, you should not delete temporary files until you have verified that they are not part of an active editing session.

Other temporary files may be left in the drawing directory or the temporary file directory.

AutoSave and SV$ under Tools, Options..., Open and Save

TIP: AutoCAD creates .BAK files that can be renamed to .DWG files.
Security Options

Specifies security settings to be used when your drawing is saved. The Password option adds a password to a drawing when it is saved.
2.5 Exiting AutoCAD

QUIT

   or
2. Type QUIT at the command prompt.
   Command: QUIT
3. Press ENTER
4. Click Yes to save changes or No to discard changes.
Chapter 3
Draw Commands
3.1 Line Command

Creates single straight line segments

1. **Choose** Draw, Line.
   
   **or**

2. **Click** the Line icon.
   
   **or**

3. **Type** LINE from the command prompt
   
   Command: **LINE** or **L**

4. **Press** ENTER

5. **Pick** From point: (point)

6. **Pick** Specify next point or [Close/Undo]: (point)

7. **Pick** Specify next point or [Close/Undo]: (point)

8. **Press** ENTER to end line sequence
   
   **or**

9. **Type** U to undo the last segment
   
   To point: **U** (undo)
   
   **or**

10. **Type** C to create a closed polygon

    To point : **C** (close)

**TIPS:**

- You can continue the previous line or arc by responding to the From point: prompt with a space or ENTER.

- Choose the right mouse button for the line pop-up menu to appear while in the line command
3.2 Cartesian Coordinate System

AutoCAD provides the user with an infinite two dimensional area to work with. Any entities placed on the working two dimensional plane can be defined relative to the Cartesian coordinate system.

The Cartesian coordinate system divides a two dimensional plane with two perpendicular axis. The X axis runs horizontally across the bottom of the screen. The Y axis runs vertically along the left side of the screen. These two axis intersect at the bottom left corner of the screen.

Each of these axis is further divided into segments. Each segment is given a value. The X axis segments increase in value to the right. The positive X values are to the right of the intersection of the two axis. The negative X values are to the left. The positive Y values are above the intersection and increase up. The negative Y values are below.

![Cartesian Coordinate System Diagram](image)
AutoCAD 2D Tutorial

Absolute Coordinates

1. **Type** \(x,y\) coordinate when AutoCAD asks for a point.

   From point: 1,1
   To point: 2,1
   To point: 2,2
   To point: 1,2
   To point: 1,1

Relative Coordinates

1. **Type** \(\text{@deltax, deltay}\) when AutoCAD asks for a point.

   From point pick point
   To point: @1,0
   To point: @0,1
   To point: @-1,0
   To point: @0,-1

Polar Coordinates

1. **Type** \(\text{@distance<angle}\) when AutoCAD asks for a point.

   From point: pick point
   To point:@1<0
   To point:@1<90
   To point:@1<180
   To point:@1<270
3.3 Orthogonal Lines

Controls lines from being drawn at various angles to straight lines. When the snap grid is rotated, ortho mode rotates accordingly.

1. **Press** Function Key F8.
   or
2. **Double Click** ORTHO from the Status Bar.
   or
3. **Press** CTRL + L.

![Diagram showing line drawn with ORTHO ON and line drawn with ORTHO OFF.](image)
3.4 Direct Distance Entry

1. Press function key **F8** to turn ORTHO (Orthogonal) lines on.
2. Type **LINE** at the command prompt.
3. Type the X or Y distance at the To pt prompt.

   Command: **LINE**
   From Pt: (pick point)
   To pt: 2
   To pt: 2

**TIPS:**
- Drag the cursor in the direction you want to draw (X or Y). If lines look crooked, be sure to check the setting for ORTHO.
3.5 Circles and Arcs

Circle Command

1. **Choose** Draw, Circle.
   
   or

2. **Click** the Circle icon.
   
   or

3. **Type** CIRCLE at the command prompt.
   
   Command: **CIRCLE**

4. **Type** One of the following options:
   
   3P/2P/TTR/<<center point>>:
   
   or

5. **Pick** A center point.

6. **Type** A radius or diameter.
   
   or

7. **Pick** A radius or diameter
   
   Diameter/<<radius>>:

**TIPS:**

- To create circles that are the same size, press ENTER when asked for the circle radius.

- When selecting a circle with a pickbox, be sure to select the circumference of the circle.
Arc Command

1. **Choose** Draw, Arc.
   or
2. **Click** the Arc icon.
   or
3. **Type** ARC at the command prompt
   Command: **ARC**
4. **Draw** One of the arcs.

**TIPS:**
- Except for 3 point arcs, arcs are drawn in a COUNTERCLOCKWISE direction.
- While in the arc command, press the right mouse button to select the following options for arcs:

Arc Examples

- 3 point arc
  - Start, center, chord length
- start, center, end
  - Start, end, radius
- Start, center, included angle
  - Start, end, direction
3.6 Command Aliases

Aliases are shortcuts or alternative names for commands that you enter at the keyboard. They are stored in a file called ACAD.PGP and are often (but not always) the first letter of the AutoCAD command. For example, copy is CO or CP because C is already used by the Circle command.

Line Alias

1. Type L at the command prompt.
   Command: L

Circle Alias

1. Type C at the command prompt
   Command: C

Arc Alias

1. Type A at the command prompt
   Command: A
Chapter 4
Erase and Selection Sets
4.1 Erase and Selection Sets

Erasing Objects

1. **Choose** Modify, Erase.
   or
2. **Click** the Erase icon.
   or
3. **Type** ERASE at the command prompt.
   Command: **ERASE** or **E**
4. **Pick** Object at the select object prompt.
   Select objects: **(pick object)**
5. **Press** ENTER when you are done choosing objects.
   Select objects: **ENTER**

TIP:
• If the cursor is not touching an object, AutoCAD will create a crossing or window selection as defined on the following pages.
4.2 Selection Set Options

Type one of the following options at the Select objects: prompt:
(point) One object.

ALL
All objects within the drawing are selected
unless they are on frozen or locked layers.

Multiple
Multiple objects selected without high
lighting (faster edits).

Last
Last object.

Previous
All objects in the previous selection-set.

Group
Objects in a named group.

AUTO
Automatic BOX (if pick in empty area).

SINGLE
One selection (any type).

Add
Add mode: adds following objects to selection-set.

Remove
Remove mode: removes following objects
from selection-set.

Window and Crossing

Window
Objects fully enclosed within Window.

Crossing
Objects within or Crossing a window.
WPolygon
All entities within the boundaries of a polygon created by inputted points.

CPolygon
All entities within or touching the boundaries of a polygon created by input.

Fence
Objects that are crossed by a temporary line.

Remove from Selection Set

1. Press **SHIFT** and select entities to remove them from the selection set.
AutoCAD 2D Tutorial

OOPS

Reinserts the last erased set of objects or block even if it was not the last command issued. Otherwise Oops acts like UNDO.

1. **Type** OOPS at the command prompt to reinsert erased objects
   Command: **OOPS**

Delete Key

AutoCAD now supports the standard Windows function of pressing DEL to erase objects.

1. **Select** Object to delete.
2. **Press** DEL on the keyboard.
Chapter 5
Basic Display Commands
5.1 ZOOM Command

Increases or decreases the apparent size of objects in the current viewport

1. **Choose** View, Zoom.

   or

2. **Click** a Zoom icon.

   or

3. **Type** ZOOM at the command prompt.

   Command: **Zoom** or **Z**

4. **Type** One of the following zoom options:

The following are basic zoom options:

- **All**: Places entire drawing (all visible layers) on display at once. Forces a regeneration.
- **Extents**: Displays current drawing content as large as possible.
- **Previous**: Restores previous view.
- **Window**: Designates rectangular area to be drawn as large as possible.
- **Number**: Magnification relative to ZOOM All display
- **Number X**: Magnification relative to current display (1X)
- **Center**: Specifies center point and new display height.
- **Dynamic**: Permits you to pan a box representing the viewing screen around the entire generated portion of the drawing and enlarge or shrink it.

**TIPS:**

- While in the ZOOM command, click with the right mouse button to see the menu to the right.
5.2 PAN Command

Shifts the location of a view.

1. **Choose** View, Pan.
   
   or

2. **Click** the Pan icon.
   
   or

3. **Type** PAN from the command prompt.
   
   Command: **PAN** or **P**

**TIPS:**

- While in the PAN command, click with the right mouse button to see the following menu.
  
  ![Menu]

  - Panning can also be done by using the window scroll bars
5.3 Redraw

Refreshes the current view.

1. Type Redraw at the command prompt
   Command: Redraw or R

**TIP:** When BLIPMODE is on, marker blips left by editing commands are removed from the current viewport

![Blips showing and Blips removed after redraw](image)

5.4 Blipmode

Controls the display of marker blips. When Blip mode is on, a temporary mark in the shape of a plus sign (+) appears where points are specified. BLIPMODE is off by default.

1. Type BLIPMODE at the command prompt.
   Command: BLIPMODE

5.4 Regen

REGEN regenerates the entire drawing and recomputes the screen coordinates for all objects. It also re-indexes the drawing database for optimum display and object selection performance.

1. Type REGEN at the command prompt.
   Command: REGEN or RE
Chapter 6
Drawing Aids
AutoCAD 2D Tutorial

6.1 SNAP Command

1. Choose Tools, Drafting Settings...

   or

2. Type SETTINGS at the command prompt.
   Command: DSETTINGS

   or

3. Type SNAP at the command prompt.
   Command: SNAP or SN

4. Type One of the following options: Snap spacing or
   ON/OFF/Aspect/Rotate/Style<1.0000>:

<table>
<thead>
<tr>
<th>Function Key F9 to turn the snap ON/OFF.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Double Click SNAP on the Status Bar.</td>
</tr>
<tr>
<td>Press CTRL + B.</td>
</tr>
</tbody>
</table>
TIP:
Click with the right mouse button on the SNAP option from the status bar as a shortcut to changing the snap settings.

SNAP Angle

1. Choose Tools, Drafting Settings...

   or

2. Type DDSETTINGS at the command prompt.
   Command: DDSETTINGS (DS)

   or

4. Type SNAP at the command prompt.
   Command: SNAP or SN

5. Type One of the following options:
   Snap spacing or ON/OFF/Aspect/Rotate/
   Style<1.0000>: R

Lines drawn with a cursor at a 45 degree angle
6.2 Grid Command

1. **Choose** Tools, Drafting Settings...
   
or

2. **Type** DSETTINGS at the command prompt.
    
    Command: **DSETTINGS (DS)**
    
or

3. **Type** GRID at the command prompt.
    
    Command: **GRID**
    
4. **Type** One of the following options:
    
    Grid spacing(X) or ON/OFF/Snap/Aspect <0.0000>:

![Drafting Settings dialog box](image)

**Turn Grid On/Off**

1. **Press** Function Key **F7** to turn the grid ON/OFF.
   
or

2. **Double Click** GRID on the Status Bar.
   
or

3. **Press** CTRL + G.

**TIP:**

Set the GRID spacing to zero (0) to match the SNAP settings.
6.3 Polar Tracking

Polar Snaps work independently from snaps. With Polar Snaps on, AutoCAD shows the distances and angles being displayed as the cursor moves.

1. Choose Tools, Drafting Settings
   or
2. Type DDSETTINGS at the command prompt.
   Command : DDSETTINGS
3. Choose the Polar tracking TAB from the dialog box.
4. Select the desired incremental angle from the dropdown list (or create a new angle).

5. Pick OK to exit the dialog box.
6. Draw a LINE using the Polar Snap references.
Chapter 7
Object Snapping
7.1 Running Object Snaps

An object snap mode specifies a snap point at an exact location on an object. OSNAP specifies running object snap modes, which remain active until you turn them off.

1. Choose Tools, Drafting Settings...
   or
2. Type DDOSNAP at the command prompt
   Command: DDOSNAP
   or
3. Click OSNAP on the Status Bar.
4. Right Click the Object Snap TAB.
5. Choose an object snap to turn ON/OFF from the dialog box.

![Drafting Settings](image.png)
7.2 Object Snap Settings

The following are object snap modes:

- **CENter**  Center of Arc or Circle
- **ENDpoint**  Closest endpoint of Line/Arc
- **INSertion**  Insertion point of Text/Block/Shape/Attribute
- **INTersection**  Intersection of Lines/Arcs/Circles
- **MIDpoint**  Midpoint of a line/Arc or midpoint
- **NEAerst**  Nearest point on a Line/Arc/Circle/Point
- **APParent Int**  Finds where two entities would intersect
- **NODE**  Nearest point entity (or Dimension definition point)
- **NONE**  None (off)
- **PERpendicular**  Perpendicular to a Line/Arc/Circle
- **QUAdrant**  Quadrant point on an Arc/Circle
- **QUIck**  Quick mode (first find, not closest)
- **TANgent**  Tangent to Arc or Circle
- **FROM**  Selects a reference point to draw.
7.3 Case by Case  (Temporary Mode)

1. **Press**  SHIFT + the RIGHT MOUSE BUTTON.

   or

2. **Click**  one of the object snaps located Object Snap toolbar icon.

   or

3. **Type**  The object snap at the prompt line.
   
   Command: Line
   
   From pt: **ENDP**
   
   To pt: **MID**
   
   To pt: **CEN**

**TIP:**

Case by Case objects snaps will override running mode object snaps
7.4 Osnap Settings

When you use any of the object snap settings, AutoSnap displays a marker and a Snap tip when you move the cursor over a snap point.

1. Choose Tools, Options...
2. Select the Drafting tab in the Options dialog box.
3. Change settings and choose OK.

7.5 Aperture

Controls the size and appearance of the pickbox used for object snap selection.

1. Type APERTURE at the command prompt
   Command: APERTURE
2. Type The size of the target box (3-8 is a good size)
   Size of target box in pixels (1-50): (number)
   or
Chapter 8
Setting Up a Drawing
List Command 8.1

   or
2. Click the List icon from the Inquiry Toolbar.
   or
3. Type LIST at the command prompt.
   Command: LIST or LI
4. Pick The object or objects to list.
   Select objects: (select)
5. Press ENTER when you are finished choosing objects:

![AutoCAD Text Window - Drawing1.dwg](image)
Measuring Distances 8.2

1. Choose Tools, Inquiry, Distance.
   or
2. Click the Distance icon from the Inquiry Toolbar.
   or
3. Type DIST at the command prompt
   Command: DIST
4. Pick The first point to measure from
   First point: pick point
5. Pick The second point to measure to
   Second point: pick point

TIP:
Be sure to use Object Snaps with the MEASURE command.
Calculating Areas 8.3

1. **Choose** Tools, Inquiry, Area.
   
or

2. **Click** the Area icon.
   
or

3. **Type** AREA at the command prompt
   
   Command: **AREA**

4. **Pick** The first point for area calculation
   
   <First point>/Object/Add/Subtract: **pick**

5. **Pick** Next point: **pick**

6. **Pick** Next point: **pick**

7. **Press** ENTER when you are finished choosing points.
   
   Area of Rectangle

   ![Diagram of area calculation](image)

   **Object** Allows user to pick an object to calculate area (circle or polyline).

   **Add** Adds separate areas for a total area calculation

   **Subtract** Subtracts areas from each other.

**TIPS:**

Be sure to use Object Snaps with the MEASURE command

To subtract an area, you must first be in “add” mode to add the first area.
ID Command 8.4

1. **Choose**  Edit, Inquiry, Locate Point.

   or

2. **Click**  the Locate Point Icon from the Inquiry Toolbar.

   or

3. **Type**  ID at the command prompt.

   Command: **ID**

4. **Pick**  A point to identity

   Point: **pick point**

   ![Diagram of point picked](image)

**TIP:**

AutoCAD returns the X,Y, and Z coordinates as well as making this the last point entered in the drawing (to move relative from)

Be sure to use Object Snaps with the ID command.
1. **Choose** Format, Units...
or
2. **Type** DDUNITS at the command prompt.
   
   **Command:** DDUNITS or UN

3. **Choose** a units and angle setting.

4. **Choose** a precision setting.
AutoCAD 2D Tutorial

Drawing Limits 8.6

The drawing limits are two-dimensional points in the World Coordinate System that represent a lower-left limit and an upper-right limit.

The drawing limits also govern the portion of the drawing covered by the visible grid and determine the minimum area a ZOOM All displays.

1. **Choose** Format, Drawing Limits.

   or

2. **Type** LIMITS at the command prompt

   Command: LIMITS

3. **Type** One of the following options

   On/Off/Lower left corner <.000,0.000>: 0,0

4. **Type** One of the following options for the upper right limit:

   Upper right corner <12.0000,9.0000>: 36,24

Drawing with lower left limit of 0,0 and upper right limit of 36,24

**TIPS:**

You can also pick points to define the limits.

The limcheck variable controls whether or not you can draw outside the limits that are set. A setting of 0 (off) indicates that you can draw outside the limits and a setting of 1(on) indicates that you cannot.
Plot Scales and Paper Sizes 8.7

The following is an example of setting up an AutoCAD drawing for a D size sheet of paper (36 x 24) with a scale of 1/16=1’).

1. **Size**
   the object you’re drawing.

2. **Border Size**
   36 x 24 plotted, 576’ x 384’ drawn.
   For some plotters, deduct a 1/2 margin on top, bottom, and left, and a 1 margin on the right.

3. **Limits**
   Lower left limit 0,0.
   Upper right limit 576’, 384’.

4. **Text Height**
   for 1/8 notes, multiply by 192 which is the reciprocal of the plot scale.
   1/8 plotted, 24” drawn.

5. **Hatch Scale**
   for patterns other than architectural.
   Hatch Scale = 192

6. **Dimension Scale**
   Dimscale = 192

7. **Ltscale**
   Ltscale = 96

_Determine your object size_
Decide Border (Paper) Size

Decide the Scale Factor for Object which is at least 260’, 240’. To do this, multiply the scale factor x paper size. (i.e.: 1/16”=1’-0’ has scale factor 192)

- 36” x 192 / 12 = 576’
- 24” x 192 / 12 = 384’
AutoCAD 2D Tutorial

Set Drawing Limits

Determine Dim Scale, Hatch Scale, Ltscale, and Text Height

- 0,0

- 576', 384'

- DIMSCALE 192
- HATCHSCALE 192
- NOTE
- LTSCALE 96 (1/2 scale)
- TEXT HEIGHT
Chapter 9
Plotting
Plot Command 9.1

1. **Choose** File, Plot.
   
   or

2. **Click** the Plotter icon.
   
   or

3. **Type** PLOT at the command prompt.

   Command: **PLOT** or **PRINT**
   
   or

4. **Press** CTRL + P
Plot Settings

1. Choose the Plot Settings tab.
2. Choose the appropriate paper size based on the chosen plotter.
3. Choose the paper units (inches or mm).
4. Choose the drawing orientation (Portrait, Landscape, Upside down).
5. Choose the plotting area.
6. Choose the plot scale.
7. Choose plot to center or specify an x or y offset.
8. Click OK.
AutoCAD 2D Tutorial

Adding a Plotter 9.2

Plotter Manager Wizard

1. Choose File, Plotter Manager
2. Double-Click the Add a Plotter Wizard icon.

AutoCAD adds a plotter configuration to a saved plot file called ?.PC3. You can then load from this file later.

3. Click Next >

My Computer will configure a plotter using Autodesk Drivers. System Printer will configure AutoCAD using Window's printer drivers that are already installed.

5. Click Next >
Choosing a Plotter Driver

6. Choose one of the Autodesk Plotter options.

Your purchased plotter should be listed here. If it is not, you can choose “Have Disk...” and specify a location for a plotter driver.

You can also plot to a file by choosing the DXB, Autodesk ePlot, or Raster File options.

Importing a .PCP or .PC2 file

7. Choose Import File... if you wish to import a previously saved plot configuration file.

8. Click Next >
AutoCAD 2D Tutorial

Define a Port

9. **Choose** an available port.
   
   **NOTE:** You can plot to a specific file name or "Autospool" to a file which can be automatically sent to the plotter at a later date.

10. **Choose** Next >

Saving a Plot Configuration Name

11. **Type** the file name you wish to save.

12. **Choose** Next >

13. **Click** Finish

AutoCAD will save a new Plot configuration icon.
Plot Styles 9.3

Add a Plot Style

A plot style controls how an object or layer is plotted by determining plotted properties such as lineweight, color, and fill style. Plot style tables collect groups of plot styles. The Plot Style Table Manager is a window that shows all the plot style tables available in AutoCAD.

There are two plot style types: color-dependent and named. A drawing can only use one type of plot style table. You can convert a plot style table from one type to the other. You can also change the type of plot style table a drawing uses once it has been set.

1. Choose File, Plot Style Manager.
2. Double-Click Add a Plot Style Table Wizard icon.
3. Click Next >
4. Choose Start from Scratch to create a new Plot Style.
   You can also use a previously configured plot style, import a style from a previous release of AutoCAD, or import a pen table.
5. Click Next >
6. **Choose**  Color-Dependent Plot Style Table

7. **Click**  Next >

8. **Type**  a name for the plot style table.

9. **Click**  Next >
10. **Choose** "Plot Style Table Editor..."

11. **Pick** an AutoCAD color and assign properties to it.

   For example, if you want all RED objects to be plotted with a pen width of .25 mm, choose that lineweight.

12. **Choose** Save and Close

13. **Choose** Finish

AutoCAD will save the file called COLORPLOTSTYLE.CBT
AutoCAD 2D Tutorial

Named Plot Styles 9.4

1. Choose File, Plot Style Manager.
2. Double-Click Add a Plot Style Table Wizard icon.
3. Click Next >
4. Choose Start from Scratch to create a new Plot Style.
5. Click Next >
6. Choose Named Plot Style Table
7. Click Next >
8. Type a name for the plot style table.
9. Click Next＞
10. Choose “Plot Style Table Editor…”
11. Create names for various styles.
12. Choose Save and Close.
Chapter 10
Edit Commands
Move Command 10.1

1. **Choose** Modify, Move.
   
   or

2. **Click** the Move icon.

   or

3. **Type** MOVE at the command prompt

   Command: **MOVE or M**

4. **Pick** Objects to move

   Select objects: (select)

5. **Pick** A point to move from

   Base point or displacement: (pick point)

6. **Pick** A point to move to

   Second point of displacement: (pick point)

   ![Circle before move](image)
   ![Circle after move](image)

**TIP:**

To move an object a specified distance, type a distance at the second point of displacement prompt: @1<0
Copy Command 10.2

1. Choose Modify, Copy. 
or
2. Click the Copy icon. 
or
3. Type COPY at the command prompt. 
   Command: COPY or CP
4. Pick Objects to copy. 
   Select objects: (select)
5. Pick A point to move from. 
   Base point or displacement/Multiple: (pick point).
6. Pick A point to copy to. 
   Second point of displacement: (pick point) 
or
7. Type A point to copy to. 
   Second point of displacement: @1<0

Duplicate objects copied

Multiple objects copied

TIP:
- To copy many objects in the same copy command, type M for Multiple at the "Base point or displacement/Multiple" option.
Previous Selection 10.3

Places selected objects in the Previous selection set

1. **Choose**   Modify, Move.

   or

2. **Click**    the Move icon.

   or

3. **Type**    MOVE at the command prompt.

   Command: MOVE or M

4. **Pick**    Objects to move.

   Select objects: (P)

*Previous Selection Set Highlighted*

**TIP:**

AutoCAD requires that objects be selected in order to be processed. The Select Objects prompt occurs after many commands, including the SELECT command itself.
Offset Command 10.4

Offset Distance

To offset a specified distance:

1. **Choose** Modify, Offset.
   
   or

2. **Choose** the Offset icon.
   
   or

3. **Type** OFFSET at the command prompt.

   Command: **OFFSET or O**

4. **Type** The distance to offset.

   Offset distance or <Through point>: (number)

5. **Pick** The object to offset.

   Select object to offset: (select object)

6. **Pick** A side to offset object to.

   Side to offset: (pick side)

7. **Pick** Another object to offset

   Select object to offset: (pick side)

   or

8. **Press** Enter to end the command.

*Offsetting objects by specifying a distance*
Offset Through Point

To offset through point:

1. **Type** OFFSET at the command prompt
   
   **Command:** OFFSET

2. **Type** T to specify a through point
   
   Offset distance or <Through point>: (T)

3. **Pick** A point to offset through (HINT: use object snaps) Select object to offset: (pick)
   
   Through point: (select object)
EXTEND 10.5

1. **Choose** Modify, Extend.
   
   or

2. **Click** the Extend icon.
   
   or

3. **Type** EXTEND at the command prompt

   Command: **EXTEND**

   Select boundary edge(s)...

4. **Pick** The BOUNDARY edge to extend to

   Select objects: (select)

5. **Press** ENTER to accept the boundary edge

   Select objects: (press enter)

6. **Pick** The objects to extend

   <Select object to extend> / Project / Edge / Undo: Select an object, enter an option, or press enter: (select)

7. **Press** ENTER when you are done choosing objects

   ![Diagram](Lines_Extended_to_an_Arc_(Arc_is_boundary_edge).png)

**TIP:**

- Use the object selection option FENCE to choose multiple objects
TRIM 10.6

The TRIM command allows you to trim objects in a drawing so they end precisely at a cutting edge defined by one or more other objects in the drawing.

1. **Choose** Modify, Trim.
   
   or

2. **Click** the Trim icon.

3. **Type** TRIM at the command prompt
   
   Command: **TRIM**
   
   Select cutting edge(s)... 

4. **Pick** The CUTTING edge to extend to
   
   Select objects: (select)

5. **Press** ENTER to accept the cutting edge
   
   Select objects: (press enter)

6. **Pick** Objects to trim
   
   <Select object to trim> / Project / Edge / Undo:
   
   Select an object, enter an option, or press enter

7. **Press** ENTER when you are done choosing objects
   
   Select object to trim/Undo: (press enter)

*TIP:* Hold the SHIFT key to interactively extend instead of trim.
Edgemode

Controls how the TRIM and EXTEND commands determine cutting and boundary edges.

0 Uses the selected edge without an extension.
1 Extends the selected edge to its natural boundary.
Mirr0r 10.7

1. **Choose** Modify, Mirror.
   or
2. **Click** the Mirror icon.
   or
3. **Type** MIRROR at the command prompt.
   Command: MIRROR
4. **Pick** Objects to mirror.
   Select objects: (select)
5. **Pick** First point of mirror line: (point)
6. **Pick** Second point: (point)
7. **Type** Yes to delete the original objects and No to keep them.
   Delete old objects? Y or N
Mirrtext 10.8

Mirror reflects (mirrors) text if 1, retains text direction if 0.

1. **Type** MIRRTEXT at the command prompt.
   
   Command: **MIRRTEXT**

2. **Type** 1 to reflect the text and 0 to retain the text.
   
   Current value <0> New value: **1 or 0**

---

**MIRRTEXT=ON**

| ABC   | OBA |

**MIRRTEXT=OFF**

| ABC   | ABC |
ROTATE 10.9

1. **Choose**  Modify, Rotate.
   
   or

2. **Click**  the Modify icon. 🔁
   
   or

3. **Type**  ROTATE at the command prompt
   
   Command : **ROTATE**

4. **Pick**  Objects to rotate:
   
   Select objects: (select)

5. **Pick**  A pivot point to rotate around
   
   Base point: (point)

6. **Type**  A rotation angle<Rotation angle>/Reference:
   
   (number)

   or

7. **Pick**  A rotation angle<Rotation angle>/Reference: (point)
Reference Angle Rotation

A positive angle causes counterclockwise rotation, and a negative angle produces clockwise rotation. If you respond to the last prompt with r, you can specify the current rotation and the new rotation you want. AutoCAD prompts:

1. **Type** R for a rotation angle<Rotation angle>/Reference: (R)
2. **Choose** An existing rotation angle Rotation angle:
   (number or points)
3. **Choose** A new rotation angle New angle:
   (number or points)

**TIP:**

You can show AutoCAD the reference angle (by pointing to the two endpoints of a line to be rotated), and then specify the new angle. You can specify the new angle by pointing or by dragging the object.
1. Choose Modify, Scale.
   or
2. Click the Scale icon.
   or
3. Type SCALE at the command prompt
   Command: SCALE
   Select objects: (select objects)
4. Pick A pivot point to scale about Base point: (point)
5. Type A rotation angle<Scale factor>/Reference:(number)
   or
6. Pick A scale factor<Scale factor>/Reference: (point)
   Scale factor/Reference: (points)
Scale by Specifying Length

You can show AutoCAD the reference length (by pointing to the two endpoints of a line to be scaled), and then specify the new length. You can specify the new length by pointing, or by dragging the object.

1. **Type**  
   R to define a reference length
   Scale factor/Reference: (R)

2. **Choose**  
   A reference scale factor
   Reference length: (number or points)

3. **Choose**  
   A new scale factor
   New length: (number or points)
AutoCAD 2D Tutorial

Text Command 11.1

Text

Creates a single-line text object

1. Type TEXT at the command prompt
   Command: TEXT
   or
2. Pick the Single Line Text icon from the Text Toolbar.
3. Pick A start point
   Justify/Style/<Start Point>: (point)
   or
4. Type J to change the justification or S to change the text style.
5. Type A text height
   Height <default>: (type value or pick two points)
6. Type A rotation angle
   Rotation angle <default>: (angle or point)
7. Type A text string
   Text: (type text string)
8. Press enter to exit the Text: prompt.

DTEXT (Dynamic Text)

Creates a single-line text object, showing the text dynamically on the screen as it is entered.

   or
2. Type DTEXT at the command prompt
   Command : DTEXT
3. Follow the steps 3-8 from above.
Text  Justification 11.2

1. Type  JUSTIFYTEXT at the command prompt

Command: JUSTIFYTEXT

or

2. Pick  the Justify Text icon from the Text Toolbar.
Text Justifications

A  Aligns text between two designated endpoints (height and angle are not requested in this case).

C  Centers the text around a specified point.

F  Aligns the text between two designated endpoints with a specified height that varies only in its X scale factor.

M  Centers the text both horizontally and vertically around a specified point.

R  Right justifies the text at a designated endpoint.

S  Selects a different text style.

TL  Starts the top left portion of text at a given point.

TC  Centers the top center of the text at a given point.

TR  Ends the top of text at a given point.

ML  Starts the middle left portion of the text at a given point.

MC  Centers the middle of text at a given point.

MR  Ends the text at the middle right portion at a given point.

BL  Starts the bottom left portion of the text at a given point.

BC  Centers the bottom center portion of the text at a given point.

BR  Ends the bottom of text at a given point.
Text Styles 11.3

Style Command

1. **Choose** Format, Text Style...
   or

2. **Type** STYLE at the command prompt.
   Command: **STYLE**

3. **Pick** the Text Style icon from the Text Toolbar.

4. **Choose** a style from the menu or create a NEW style.

5. **Choose** a font file.

6. **Type** a height for the text (set to zero to vary heights)

7. **Type** a width factor for each character.
   Width factor <1>: (**enter**)

8. **Type** an obliquing (slant) angle.
   Obliquing angle <0>: (**angle** or **enter**)

9. **Type** Yes or No to place characters backwards.
   Backwards? (**Y** or **N**)

10. **Type** Yes or No to draw characters upside down.
    Upside down? (**Y** or **N**)

11. **Type** Yes or No to draw characters vertically
Font Files

AutoCAD supports the following font types:

- `.SHX` AutoCAD Fonts
- `.PFB` Adobe Type I Fonts
- `.PFA`
- `.TTF` Windows True Type Fonts

**TIP:**

To replace the font globally in a drawing, type `style` at the command prompt and keep the same style name but replace the font file with the new font. When AutoCAD regenerates, it will replace all text drawn with that style with the new font.
Multiline Text 11.4

Mtext Command

1. **Choose** Draw, Text, Multiline Text...
   or
2. **Pick** the Mtext icon.  
   or
3. **Type** MTEXT at the command prompt.
   Command: **MTEXT**
4. **Type** One of the following options
   Height/Justify/Rotation/Style/Width:
   or
5. **Pick** 2Points to define the text window.

6. **Type** text or change an MTEXT setting.
MTEXT options:

**Rotation**  Controls the rotation angle of the text boundary.

**Style**  Specifies the text style to use in paragraph text.

**Height**  Specifies the height of uppercase text

**Direction**  Specifies whether text is vertical or horizontal.

**Width**  Specifies the width of the text boundary.

*MTEXT Editor*

This is AutoCAD MTEXT.
AutoCAD 2D Tutorial

Editing Text 11.5

DDEDIT

1. **Choose** Modify, Text...
   
   or

2. **Click** the Edit Text icon from the Text toolbar.
   
   or

3. **Type** DDEDIT at the command prompt.

   Command: **DDEDIT or ED**

4. **Pick** The text to edit.

   Select objects: (pick text)

5. **Pick** Additional text or ENTER to end the command.

   Select objects: ENTER

*Text Edit Dialog Box for TEXT and DTEXT Commands*

*Text Edit for MTEXT command*
Special Control Codes 11.6

AutoCAD provides special control codes to return drafting symbols when using text.

1. **Type**

   The following characters to return equivalent symbol:
   - `%%d`: degree symbol (°)
   - `%%c`: diameter symbol (Ø)
   - `%%p`: plus minus symbol (±)
   - `%%u`: to start and stop underlining (NOTE)
   - `%%o`: to start and stop overscoring (NOTE)

The MTEXT command has additional symbols that can be accessed by right-clicking in the MText Editor for more Special Symbols.
Spell Check 11.7

1. Choose Tools, Spelling

   or

2. Type SPELL at the command prompt.

   Command: SPELL

3. Pick The text to spell check.

   Select objects: (pick text)

4. Choose Change or Ignore to modify or accept the spelling of a word.

5. Pick Change Dictionaries to create your own dictionary.
Scale Text 11.8

1. **Type** `SCALETEXT` at the command prompt.
   
   **Command:** `scaletext`

   or

2. **Pick** the Scale Text icon from the Text Toolbar.
   
   **Select objects:** `pick text to scale`

   **Select objects:** `enter`

   **Enter a base point option for scaling**

   `[Existing/Left/Center/Middle/Right/TL/TC/TR/ML/MC/MR/BL/BC/BR] <Existing>:`

   **Specify new height or [Match object/Scale factor] <153/256”>:** `s`

   **Specify scale factor or [Reference] <2”>:** `.5`

---

*Scaled Text*

![Scaled Text Image]
Chapter 12
Layers, Linetypes, Colors
AutoCAD 2D Tutorial

Introduction to Layers and Layer Dialog Box

1. **Choose** Format, Layer.

   or

2. **Type** LAYER at the command prompt.

   Command: LAYER (or LA)

   or

3. **Pick** the layers icon from the Layer Control box on the object properties toolbar.
Layer Options 12.2

?  Lists layers, with states, colors and linetypes.

Make  Creates a new layer and makes it current.

Set  Sets current layer.

New  Creates new layers.

ON  Turns on specified layers.

OFF  Turns off specified layers.

Color  Assigns color to specified layers.

Ltype  Assigns linetype to specified layers.

Freeze  Completely ignores layers during regeneration.

Thaw  Unfreezes specified layers Ltype.

Lock  Makes a layer read only preventing entities from being edited but available visual reference and osnap functions.

Unlock  Places a layer in read write mode and available for edits.

Plot  Turns a Layer On for Plotting

No Plot  Turns a Layer Off for Plotting

LWeight  Controls the line weight for each layer

TIP:

Layers can be set using the command line prompts for layers. To use this, type –LAYER or -LA at the command prompt

1. **Type**  
   Command: -LAYER or LA

2. **Type**  
   One of the following layer options

   ?/Make/Set/New/ON/OFF/Color/Ltype/Freeze/Thaw:
Layer Shortcuts 12.3

Changing the Layer of an Object

1. **Click** Once on the object to change.

2. **Select** the desired layer from the Layer Control Box dropdown.

   AutoCAD will move the object to the new layer.
AutoCAD 2D Tutorial

Making a Layer Current

1. **Click** once on the Make Object’s Layer Current icon.

2. **Select** object whose layer will become current:

**Match Properties**

1. **Choose** Modify, Match Properties.

   or

2. **Click** the Match Properties Icon from the Standard toolbar.

   or

3. **Type** Command: **MATCHPROP or MA**

4. **Select** the object whose properties you want to copy (1).

5. **Select** the objects to which you want to apply the properties (2).
1. **Open** an AutoCAD drawing with layers.
2. **Turn** layers on/off.
3. **Zoom** or perform any AutoCAD Command.
4. **Type** LAYERP at the command prompt.
   Command: LAYERP
   or
5. **Click** the Layer Previous icon.
AutoCAD 2D Tutorial

Layer States 12.5

1. **Choose** the layer icon.
2. **Select** various layers to be ON, OFF, FROZEN, LOCKED, etc.
3. **Choose** the Save State button.
4. **Choose** Restore State to restore the layer settings.
Color Command 12.6

1. **Choose** Format, Color.
   
   or

2. **Type** DDCOLOR at the command prompt.
   
   Command: DDCOLOR or COL
   
   or

3. **Choose** Color on the Object Properties toolbar and then select a color from the list or select Other to display the Select Color dialog box.

![Select Color dialog box](image)

**TIP:**

These settings ignore the current layer settings for color.

**By Layer**

If you enter bylayer, new objects assume the color of the layer upon which they are drawn.

**By Block**

If you enter byblock, AutoCAD draws new objects in the default color (white or black, depending on your configuration) until they are grouped into a block. When the block is inserted in the drawing, the objects in the block inherit the current setting of the COLOR command.
1. Choose Format, Linetype...

or

2. Type DDLTYPE at the command prompt.

Command: **DDLTYPE or LT**

3. Choose Load... to see a list of available linetypes.

4. Choose the desired linetype to assign.

5. Click OK.
Lineweights 12.8

Loading and Changing Lineweights

1. Choose Format, Lineweight...

   or

2. Type LINEWEIGHT at the command prompt.

   Command: LINEWEIGHT or LWEIGHT

   or

4. Pick a lineweight to make current from the Object Properties menu.

   ![Lineweight Settings](image)

TIPS:

- Lineweights can also be assigned to layers.

- The Display Lineweights feature can be turned on/off on the status bar to show or not show lineweights in the drawing, thus making regenerations faster.

- Lineweights are displayed using a pixel width in proportion to the real-world unit value at which they plot. If you are using a high-resolution monitor, you can adjust the lineweight display scale to better display different lineweight widths.
Object Properties 12.9

1. Choose Modify, Properties.
   or
2. Click the Properties icon.
   or
3. Type DDCHPROP or DDMODIFY at the command prompt.
   Command: DDCHPROP (CH) or DDMODIFY (MO)
4. Pick Objects whose properties you want to change
   Pick a window for DDCHPROP, single object for DDMODIFY.
   Select objects: (select)
5. Press ENTER to accept objects.
   Select objects: (press enter)
6. Choose One of the following properties to change.
Chapter 13
More Edit Commands
1. **Choose** Modify, Break.
   or
2. **Click** the Break icon.
   or
3. **Type** BREAK at the command prompt. Command: **BREAK**
4. **Pick** Object to break.
   Select object: (select one object)
5. **Pick** A second break point.
   Enter second point: (point)

6. **Type** F to choose a different break point
   Enter second point (or F for first point): (F)
7. **Pick**  
The first break point on the object  
Enter first point: (point)

8. **Pick**  
A second break point

**TIP:**  
You can also type coordinates instead of picking a break point. Enter second point (or F for first point):  
@3’<0

If you break a circle, it changes to an arc by deleting the portion from the first point to the second, going counterclockwise.

Breaking a Polyline with nonzero width will cause the ends to be cut square.
Stretch 13.2

1. **Choose** Modify, Stretch.
   
   or

2. **Click** the Stretch icon.

3. **Type** STRETCH at the command prompt.
   
   Command: **STRETCH**

   Select objects to stretch by window...

4. **Type** C to choose CROSSING window
   
   Select objects: **C**

5. **Pick** A first corner to stretch. First corner: (point)

6. **Pick** The opposite corner to window the objects to stretch.
   
   Other corner: (point)

7. **Press** ENTER to accept objects to stretch.

8. **Pick** A base point to stretch from Base point: (point)
9. **Pick**  A point to stretch to New point: *(point)*  
   or  
10. **Type**  A distance to stretch. New point: *@1<0*

**TIP:**  
The Stretch command must use a CROSSING window or a CROSSING POLYGON window.
Fillet 13.3

1. **Choose** Modify, Fillet.
   or

2. **Click** the Fillet icon.
   or

3. **Type** FILLET at the command prompt. Command: **FILLET**

4. **Pick** First object to fillet. Polyline/Radius/Trim<Select two objects>: select first object.

5. **Pick** Second object to fillet.
   Select second object: select second object.
   or

6. **Type** One of the following options:

   - **P** Fillets an entire Polyline.
   - **R** Sets the fillet radius.
   - **T** Sets the trimmode (trim cuts the fillet corner and no trim keeps the fillet corner).

**TIP:**

- You can also fillet PARALLEL lines as well as PLINES with LINES
- Type a radius of zero (0) to create a clean 90 degree corner.
Chamfer 13.4

1. Choose Modify, Chamfer.
   or
2. Click the Chamfer icon.
   or
3. Type CHAMFER at the command prompt.
   Command: CHAMFER
4. Pick First object to chamfer.
   Polyline/Distance/Angle/Trim/Method<Select first line>: select first object
5. Pick Second object to chamfer.
   Select second object: select second object.
   or
6. Type One of the following options:

   P                             Chamfers entire Polyline.
   D                             Sets chamfer distances.
   A                             Uses a distance and angle method instead of two distances.
   T                             Sets the trimmode
   M                             Sets the method to distance or angle.

Chamfer with equal distances

Chamfer with different distances
Array 13.5

Rectangular Array

To draw rectangular array:

1. **Choose** Modify, Array.
   
   or

2. **Click** the Array icon.
   
   or

3. **Type** *ARRAY* at the command prompt. Command: **ARRAY**

4. **Pick** Objects to array.
   
   Select objects: (select)

5. **Type** *The number of rows top to bottom.* Number of rows<--- <1>: (number)

6. **Type** The number of columns left to right. Number of columns (|||)<1>: (number)

7. **Type** The unit cell distance between items in each row.
   
   *Distance between rows:* (+ number=up, -number =down)

8. **Type** The unit cell distance between items in each column.
   
   Distance between columns:(+number=right, - number =left)
To draw a polar array:

1. **Choose** Modify, ARRAY.
   
   or

2. **Click** the Array icon.
   
   or

3. **Type** ARRAY at the command prompt. Command: **ARRAY**

4. **Pick** Objects to array.

   Select objects: (select)

5. **Type** P to draw a polar array. Rectangular or Polar array (R/P): **P**

6. **Pick** A center point for the array. Center point of array: **pick point**

7. **Type** The TOTAL number of items in the array. **Number of items**: number

8. **Type** The number of degrees to rotate the objects. Degrees to fill (+=CCW, -CW)<360>: number
9. **Type**
Yes or No to rotate objects.

Rotate objects as they are copied? <y> Y or N

[Image of AutoCAD 2D array tool with center point of array highlighted]

**Center point of array**
Lengthen 13.6

1. **Choose** Modify, LENGTHEN.

2. **Type** LENGTHEN at the command prompt. Command: `_lengthen`
   
   Select an object or [DElta/Percent/Total/]
   
   Enter delta length or [Angle] <0.0000>: 2
   
   Select an object to change or [Undo]: pick object

*Object before lengthen*

```
__________
```

*Object after lengthen*

```
__________
```
Chapter 14
Advanced Display Commands
Transparent Commands 14.1

Transparent commands are those started while another is in progress. Precede transparent commands with an apostrophe.

1. **Type** LINE at the command prompt.
   
   Command: **LINE**
   Specify first point: *(pick point)*
   Specify next point or [Undo]: ’zoom
   >>>Specify corner of window, enter a scale factor (nX or nXP), or
   [All/Center/Dynamic/Extents/Previous/Scale/Window] <real time>: *(pick corner)*
   >>>>>Specify opposite corner: *(pick other corner)*

   **TIP:**
   
   Commands that do not select objects, create new objects, or end the drawing session usually can be used transparently.
Multiple Command 14.2

Multiple repeats the specified command until canceled.

If you want to repeat a command that you have just used, press ENTER or SPACEBAR, or right-click your pointing device at the Command prompt.

You also can repeat a command by entering multiple, a space, and the command name, as shown in the following example:

1. **Type** MULTIPLE before each command

   Command: **multiple circle**
AutoCAD 2D Tutorial

Calculator (CAL Command) 14.3

Evaluates mathematical and geometric expressions

1. **Type** CAL at the command prompt. Command: cal
   (or ‘cal) Initializing...>>
   
   Expression: 1+1

2

**Numeric operators**

- ( ) Groups expressions
- ^ Indicates exponentiation
- *, / Multiplies, divides
- +, - Adds, subtracts

**Vector operators**

- ( ) Groups expressions
- & Determines the vector product of vectors (as a vector)
  \[ [a,b,c] \times [x,y,z] = \begin{bmatrix} (b\times z) - (c\times y) \\ (c\times x) - (a\times z) \\ (a\times y) - (b\times x) \end{bmatrix} \]
- * Determines the scalar product of vectors (as a real number)
  \[ [a,b,c] \cdot [x,y,z] = ax + by + cz \]
- *, / Multiplies, divides a vector by a real number a*
  \[ [x,y,z] = [a times x,a times y,a times z] \]
- +, - Adds, subtracts vectors (points)
  \[ [a,b,c] + [x,y,z] = [a+x,b+y,c+z] \]
Converts units of measure

1. **Type** CAL at the command prompt.

   Command: **cal (or ‘cal)**

   Initializing...>> Expression: **cvunit(1, inch, cm)**

   2.54

Determines Angles

1. **Type** CAL at the command prompt.

   Command: **cal (or ‘cal)**

   Initializing...>> Expression: **ang(end, end, end)**

   45
Chapter 15
Polylines
A polyline is a connected sequence of line segments created as a single object. You can create straight line segments, arc segments, or a combination of the two.

1. **Choose** Draw, Polyline.
   
   or

2. **Pick** the Pline icon.

3. **Type** PLINE at the command prompt
   
   Command : *PLINE* or *PL*

4. **Pick** A point on the drawing to start the polyline
   
   From point: (select)

5. **Type** One of the following options
   
   Arc/Close/Halfwidth/Length/Undo/Width/<endpoint of line>: 
   
   or

6. **Pick** A point to continue drawing
   
   Arc/Close/Halfwidth/Length/Undo/Width/<endpoint of line>: (pick point)

*Polyline as one segment*
**PLINE options:**

- **Arc**
  Toggles to arc mode and you receive the following: *Angle*/CEnter/CClose/Direction/Halfwidth/
  Line/Radius/Second Pt/Undo/Width/<endpt of arc>:

- **Close**
  Closes a polyline as it does in the line command.

- **Halfwidth**
  Specifies the halfwidth of the next polyline segments. Can be tapered.

- **Length**
  Specifies the length to be added to the polyline in the current direction.

- **Undo**
  Undoes the previous pline segment as with the line command.

- **Width**
  Specifies the width of the next polyline segments. Can be tapered.

![Polyline examples](image)
AutoCAD 2D Tutorial

Editing Polylines 15.2

1. Choose *Modify, Polyline.*
   or
2. Pick the Pedit icon from the Modify II toolbar.
3. Type PEDIT at the command prompt
   Command: PEDIT
4. Pick Pick a polyline to edit
   Select Polyline: (pick)
5. Type One of the following options: Close/Join/ Width/Edit vertex/Fit Curve/Spline/Curve/
   Decurve/Undo/eXit

PEDIT options:

- **Close** Closes open polyline segments
- **Join** Connects polylines, lines, and arcs to existing polylines.
- **Width** Changes the width for all polyline segments.
- **Fit curve** Creates curved arc segments around pline vertices at the direction you specify.
- **Spline Curve** Creates a curve through control points on a polyline.
- **Decurve** Straightens curved segments.
- **Edit Vertex** Displays the following Edit Vertex Options:

Polyline width change

Splined Polyline
PLINEGEN

Sets how linetype patterns are generated around the vertices of a two-dimensional polyline. Does not apply to polylines with tapered segments.

0  Polylines are generated to start and end with a dash at each vertex

1  Generates the linetype in a continuous pattern around the vertices of the polyline.

Edit Vertex Options

1.  Type  One of the following vertex options:
      Next/Previous/Break/Insert/Move/Regen/Straighten/Tangent/Width/eXit <N>:

      Next  Moves the X to the next vertex
      Previous  Moves the X to the previous vertex
      Break  Remembers the currently marked vertex and allows you to move to another vertex. You can then remove the segments between these vertices. Closed plines will open.
      Insert  Adds a new vertex after the currently marked vertex.
      Move  Moves the location of the currently marked vertex.
      Regen  Regenerates the pline. Used with the width option.
      Straighten  Remembers the currently marked vertex and allows you to move to another vertex. You can then replace the segments between these vertices with a straight one.
      Tangent  Attaches a tangent direction to the current vertex for later use in curve fitting.
      Width  Changes starting and ending widths for the segment following the marked vertex.
      eXit  Exits from editing vertices.
Editing Multiple Polylines 15.3

1. **Type** the PEDIT at the command prompt. **Command:** PEDIT

   Select polyline or [Multiple]: **M**

   Pick multiple polylines to edit.
**Explode Command 15.4**

1. **Choose**  *Modify, Explode.*
   
   or

2. **Pick**  the Explode icon.

3. **Type**  EXPLODE at the command prompt.
   
   Command: **EXPLODE**
   
   or

4. **Pick**  The object to explode. Select objects: *(pick)*

   ![Polyline before explode](example_polyline.png)
   
   Polyline before explode

   ![Polyline (line) after explode](example_polyline.png)
   
   Polyline (line) after explode
Turning Lines into Polylines 15.5

Use the PEDIT command to pick lines. AutoCAD will ask if you want to turn these lines into polylines. You can then use the JOIN option under PEDIT to join additional lines to the polyline.

1. Command: `pedit`
   Select polyline or [Multiple]: `pick line`
   Object selected is not a polyline
   Do you want to turn it into one? <Y>
   Enter an option [Close/Join/Width/Edit vertex/Fit/Spline/Decurve/Ltype gen/Undo]: `j`

**TIP:**
- Lines and Arcs must have a common endpoint to join them together.
Chapter 16
More Draw Commands
Polygon 16.1

1. **Choose** Draw, Polygon.
   or

2. **Click** the Polygon icon.
   or

3. **Type** Polygon at the command prompt.
   Command: **POLYGON**

4. **Type** The number of sides for the polygon (3-1024)
   Number of sides <default>: **number**

5. **Pick** The center of the polygon. Edge/<Center of polygon>: **pick**
   or

6. **Type** **E** to define the polygon by two edges.

7. **Type** **I** or **C** to place the polygon inside or outside of an imaginary circle.
   Inscribed in circle/Circumscribed about circle (I/C):

---

Polygon Inscribed in an imaginary circle

Polygon circumscribed around an imaginary circle
AutoCAD 2D Tutorial

**Rectangle 16.2**

1. **Choose** Draw, Rectangle.
   
or

2. **Click** the Rectangle icon.
   
or

3. **Type** Rectang at the command prompt Command:
   RECTANG Chamfer/Elevation/Fillet/Thickness/Width/
   <First corner>:

4. **Pick** first corner.

5. **Pick** other corner or type coordinates (i.e. @4,2).
Spline 16.3

The SPLINE command creates a particular type of spline known as a nonuniform rational B-spline (NURBS) curve. A NURBS curve produces a smooth curve between control points.

1. Choose Draw, Spline.
   or
2. Click the Spline icon.
   or
3. Type SPLINE at the command prompt
   Command: SPLINE
4. Pick A start point for the spline
   Object / <Enter first point>: (pick point)
5. Pick Points until you are done drawing splines
   Enter point: (pick points)
6. Press Enter or close to complete the spline
7. Pick Starting tangent point for the spline
   Enter start tangent (pick point)
8. Pick Ending tangent point for the spline
   Enter end tangent: (pick point)
**AutoCAD 2D Tutorial**

**Spline options:**

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Object</strong></td>
<td>Converts 2D or 3D spline-fit polylines to equivalent Splines</td>
</tr>
<tr>
<td><strong>Points</strong></td>
<td>Points that define the spline</td>
</tr>
<tr>
<td><strong>Close</strong></td>
<td>Closes a spline.</td>
</tr>
<tr>
<td><strong>Fit Tolerance</strong></td>
<td>Allows you to set a tolerance value that creates a smooth spline.</td>
</tr>
</tbody>
</table>

**TIP:** Refer to AutoCAD online help topic for more information on spline options.
Editing Splines 16.4

1. Choose Modify, Object, Spline.

**TIP:** Drawings containing splines use less memory and disk space than those containing spline-fit polylines of similar shape.
Covert PLINE to Spline 16.5

1. **Draw** a PLINE.
2. **Type** PEDIT to edit the polyline as a spline.
3. **Choose** Draw, Spline.
4. **Type** Object at the command prompt.
5. **Click** once on the polyline to turn it into a spline.

**TIP:** Use the LIST command to determine if an object is a PLINE or SPLINE.
**Donut 16.6**

Donuts are filled rings or solid-filled circles that actually are closed polylines with width.

1. **Choose** Draw, Donut.

   or

2. **Type** Donut at the command prompt.
   
   Command: **DONUT**

3. **Type** A value for the inside diameter.
   
   Inside diameter <last>: 0.5

4. **Type** A value for the outside diameter.
   
   Outside diameter <last>: 1

5. **Pick** A point for the center of the donut.
   
   Center of doughnut: (point)
Ellipse 16.7

Creates an ellipse or an elliptical arc.

1. **Choose** Draw, Ellipse.
   - or
2. **Choose** the Ellipse or Partial Ellipse icon.
   - or
3. **Type** ELLIPSE at the command prompt
   
   Command: ELLIPSE
4. **Type** One of the following options: Arc/Center/Isocircle /<Axis endpoint 1>:

**Ellipse options:**

- **Axis endpoint 1** Defines the first axis by two specified endpoints. The angle of the first axis determines the angle of the ellipse. The first axis can define either the major or the minor axis of the ellipse.

- **Axis endpoint 2:** <Other axis distance> / Rotation: Specify a point or enter a distance

- **Arc** Creates an elliptical arc. The angle of the first axis determines the angle of the elliptical arc. The first axis can define either the major or the minor axis of the elliptical arc.

- **Center** Creates the ellipse by a specified center point.

- **Isocircle** Creates an isometric circle in the current isometric drawing plane.

- **Rotation** The major axis is now treated as the diameter of a circle that will be rotated a specified amount around the axis. You enter an angle between 0 and 89.4 degrees.
**AutoCAD 2D Tutorial**

Multilines 16.8

MLINE Command

Creates multiple parallel lines.

1. **Choose** Draw, Multiline.
   or
2. **Type** MLINE at the command prompt.
   Command: **MLINE**
3. **Pick** A point to start the multiline.
   Justification/Scale/STyle/<From point>: pick point
4. **Pick** A second point to continue the multilines.
   <To point>: **pick point**
5. **Pick** The next point to continue drawing multilines.
   Undo/<To point>: pick point
6. **Press** ENTER to end the multilines.
   Close/Undo/<To point>: press enter or
7. **Type** C to close the multilines back to the first point.
   Close/Undo/<To point>: **c**
Multiline Justifications

Top Justification

Bottom Justification

Zero Justification
Multiline Styles 16.9

1. **Choose** Format, Multiline Style...
   or
2. **Type** MLSTYLE at the command prompt.
   Command: **MLSTYLE**
3. **Rename** The existing style called STANDARD to your new style.
4. **Choose** Element Properties to change the appearance of the multilines.
5. **Choose** ADD to create the new multiline.
Editing Multilines 16.10

1. Choose Modify, Multiline...
   or
2. Type MLEDIT at the command prompt
   Command: MLEDIT
3. Choose From one of the mledit options:
Construction Line 16.11

Creates an infinite line.

1. Choose Draw, ConstructionLine
   or
2. Choose the XLINE icon.
   or
3. Type XLINE at the command prompt.
   Command: XLINE
   Specify a point or [Hor/Ver/Ang/Bisect/Offset]:

XLINE Options

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>HOR</td>
<td>Creates a horizontal xline passing through a specified point.</td>
</tr>
<tr>
<td>VER</td>
<td>Creates a vertical xline passing through a specified point.</td>
</tr>
<tr>
<td>ANG</td>
<td>Creates an xline at a specified angle.</td>
</tr>
<tr>
<td>BISECT</td>
<td>Creates an xline that passes through the selected angle vertex and bisects the angle between the first and second line.</td>
</tr>
<tr>
<td>OFFSET</td>
<td>Creates an xline parallel to another object.</td>
</tr>
</tbody>
</table>
Ray Command 16.12

Creates an infinite line in one direction.

1. **Choose**  Draw, RAY  
   or  
2. **Type**  RAY at the command prompt.  
   Command: **RAY**  
   Specify a point: *(pick through point)*

![Diagram of ray command usage]
Chapter 17
Crosshatching
BHATCH Command 17.1

1. **Choose**  
   Draw, Hatch...  
   or  

2. **Click**  
   the Hatch icon.  
   or  

3. **Type**  
   BHATCH at the command prompt  
   Command: **BHATCH**
BHATCH options:

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pattern Type</td>
<td>Sets the current pattern type by using AutoCAD's predefined patterns or user defined patterns.</td>
</tr>
<tr>
<td>Pattern Properties</td>
<td>Sets the current pattern, scale, angle, and spacing. Controls if hatch is double spaced or exploded.</td>
</tr>
<tr>
<td>Pick Points</td>
<td>Constructs a boundary from existing objects that form an enclosed area.</td>
</tr>
<tr>
<td>Select Objects</td>
<td>Selects specific objects for hatching. The Boundary Hatch dialog box disappears and AutoCAD prompts for object selection.</td>
</tr>
<tr>
<td>Inherit Properties</td>
<td>Applies the properties of an existing associative hatch to the current Pattern Type and Pattern Properties options.</td>
</tr>
<tr>
<td>Preview Hatch</td>
<td>Displays the hatching before applying it. AutoCAD removes the dialog box and hatches the selected areas.</td>
</tr>
<tr>
<td>Associative</td>
<td>Controls associative hatching.</td>
</tr>
<tr>
<td>Apply</td>
<td>Creates the crosshatching in the boundary.</td>
</tr>
</tbody>
</table>
Advanced Hatch Options 17.2

1. Choose the Advanced... TAB from the BHATCH dialog.
2. Choose one of the following advanced options:

Define Boundary Set

Defines the set of objects AutoCAD analyzes when defining a boundary from a specified pick point.

Hatchstyle

Specifies the method used to hatch objects within the outermost hatch boundary. If there are no internal objects selected, specifying a hatching style has no effect.

Boundary Options

Specifies whether or not the temporary boundary objects will be added to the drawing.
Gradient Hatch 17.3

1. Choose the Gradient... TAB from the BHATCH dialog.
2. Choose one of the following advanced options:
1. Choose Modify, Hatch...
   or
2. Click the Hatch Edit icon from the Modify II toolbar.
   or
3. Type HATCHEDIT at the command prompt.
   Command: HATCHEDIT
4. Choose One of the BHATCH options to modify.
5. Pick The OK button.
Inherit Hatch 17.5

1. **Choose** Draw, Hatch...
   or
2. **Click** the Hatch icon.
   or
3. **Type** BHATCH at the command prompt
   Command: **BHATCH**
4. **Choose** Inherit Properties.
5. **Pick** the crosshatch of an existing associative hatch to make the current Pattern Type and Pattern Properties options. Preview Hatch Displays the hatching before applying it.
Chapter 18
Regions and Boundaries
Boundary Command 18.1

Defines the object type, boundary set, and island detection method for defining boundaries from points you specify.

1. **Choose** Draw, Boundary
   or
2. **Type** BOUNDARY at the command prompt.

   **Command:** BOUNDARY

---

**Boundary created**

---

**Pick internal point**
Region Command 18.2

Regions are two-dimensional areas you create from closed shapes or loops. Closed polylines, lines, and curves are valid selections. Curves include circular arcs, circles, elliptical arcs, ellipses, and splines.

1. **Choose** Draw, Region
2. **Type** REGION at the command prompt.

   Command: **REGION**
   
   Select objects: *(pick boundary)*
   
   Select objects: 1 found
   
   1 loop extracted.
   
   1 Region created.

Object created as a region
Mass Properties 18.3

Calculates the mass properties of regions or solids.

1. **Choose** Tools, Inquiry, Region/Mass Properties
2. **Type** MASSPROP at the command prompt.
   
   Command: MASSPROP
   
   Select objects: (pick region)

--- REGIONS ---

Area: 11.1328
Perimeter: 16.3734
Bounding box: X: 3.1508 -- 7.1352
               Y: 2.8950 -- 6.8942
Centroid: X: 5.1508
          Y: 4.8946
Moments of inertia: X: 276.6983
                    Y: 305.3510
Product of inertia: XY: 280.6701
Radii of gyration: X: 4.9854
                   Y: 5.2372

Chapter 19
Blocks and Attributes
Creating Local Blocks (BMAKE) 19.1

1. **Choose** Draw, Block, Make.
   
   or

2. **Click** the Make Block icon.

   or

3. **Type** BMAKE at the command prompt.

   Command: BMAKE or BLOCK

4. **Type** the name of the block.

5. **Pick** an insertion point.

6. **Select** objects to be included in the block definition.

7. **Click** OK.

**Note** You cannot use DIRECT, LIGHT, AVE_RENDER, RM_SDB, SH_SPOT, and OVERHEAD as valid block names.
Inserting Blocks 19.2

1. **Choose** Insert, Insert Block
   or
2. **Click** the Insert icon from the INSERT toolbar.
3. **Type** INSERT at the command prompt.
   Command: **INSERT**
4. **Choose** the name to insert a local block and Browse... to insert a Wblock.
5. **Choose** the insertion point, scale, and rotation of the block.

![Insert dialog box](image)

*Block Inserted with a zero degree rotation angle*

*Block Inserted with a ninety degree rotation angle*
Typing Insert (-INSERT)

1. **Type** - INSERT at the command prompt.
   
   Command: **-INSERT**

2. **Type** Block name to insert.
   
   Insert block name or (?) **type name**

3. **Pick** An insertion point. Insertion point: **pick point**

4. **Press** ENTER to keep the same x scale factor as the original block.
   
   X scale factor <1>Corner / XYZ:

5. **Press** ENTER to keep the same x scale factor as the original block.
   
   Y scale factor (default=X):

6. **Press** ENTER to keep a rotation angle of zero. Rotation angle <0>:
   
   or

7. **Pick** A rotation angle.
Control the Color and Linetype of Blocks 19.3

The objects in an inserted block can retain their original properties, can inherit properties from the layer on which they are inserted, or can inherit the properties set as current in the drawing.

You have three choices for how the color, linetype, and lineweight properties of objects are treated when a block reference is inserted.

- Objects in the block do not inherit color, linetype, and lineweight properties from the current settings. The properties of objects in the block do not change regardless of the current settings.

- For this choice, it is recommended that you set the color, linetype, and lineweight properties individually for each object in the block definition: do not use BYBLOCK or BYLAYER color, linetype, and lineweight settings when creating these objects.

- Objects in the block inherit color, linetype, and lineweight properties from the color, linetype, and lineweight assigned to the current layer only.

- For this choice, before you create objects to be included in the block definition, set the current layer to 0, and set the current color, linetype, and lineweight to BYLAYER.

- Objects inherit color, linetype, and lineweight properties from the current color, linetype, and lineweight that you have set explicitly, that is, that you have set to override the color, linetype, or lineweight assigned to the current layer. If you have not explicitly set them, then these properties are inherited from the color, linetype, and lineweight assigned to the current layer.

- For this choice, before you create objects to be included in the block definition, set the current color or linetype to BYBLOCK.

<table>
<thead>
<tr>
<th>If you want objects in a block to</th>
<th>Create objects on these layers</th>
<th>Create objects with these properties</th>
</tr>
</thead>
<tbody>
<tr>
<td>Retain original properties</td>
<td>Any but 0 (zero)</td>
<td>Any but BYBLOCK or BYLAYER</td>
</tr>
<tr>
<td>Inherit properties from the current layer</td>
<td>0 (zero)</td>
<td>BYLAYER</td>
</tr>
<tr>
<td>Inherit individual properties first, then layer properties</td>
<td>Any</td>
<td>BYBLOCK</td>
</tr>
</tbody>
</table>
Wblock Command 19.4

Wblocks objects to a new drawing file.

1. **Type** WBLOCK at the command prompt
   
   **Command:** WBLOCK

2. **Type** A drawing name (and location).

3. **Type** A block name if a local block already exists. **Block name:** name or

4. **Press** ENTER to create a block.

5. **Pick** An insertion point on the object
   
   **Insertion base point:** pick a point

6. **Pick** Objects to create the block.
   
   **Select objects:** pick objects

7. **Press** ENTER to end the selection set.

![Write Block dialog box](image-url)
Purge 19.5

1. **Choose** File, Drawing Utilities, Purge.
   
   or

2. **Type** PURGE at the command prompt

   **Command**: PURGE

3. **Choose** One of the following purge options:
   
   Purge unused
   
   Blocks/Dimstyles/Layers/ LTypes/ 
   SHapes/STyles/Mlinestyles/All:
Defining Attributes 19.6

1. Choose Draw, Block, Define Attributes...

   or

2. Type ATTDEF at the command prompt. Command: ATTDEF

3. Choose TAG to specify each attribute occurrence in the drawing.

4. Choose Prompt to fill in the prompt that the user sees when placing the attribute.

5. Choose Value to fill in a default value.

6. Pick An insertion point for each attribute

7. Create A block which includes the new attributes.

Toggle the following mode settings to on or off.

- **Invisible** Does not display, but allows extraction.
- **Constant** All occurrences of this Attribute have the same value.
- **Verify** Issues extra prompts to verify a proper value.
- **Preset** Does not prompt for this Attribute during Block insertion.
AutoCAD 2D Tutorial

Editing Attributes 19.7

1. **Choose**  
   Modify, Object, Attribute, Single...
   
or

2. **Click**  
   the Edit Attribute icon from the Modify II Toolbar.
   
or

3. **Type**  
   ATTEDIT at the command prompt
   
   Command: ATTEDIT

4. **Pick**  
   The block to edit
   
   Select block: pick
Block Attribute Manager 19.8

1. **Open** a drawing with attributes.
2. **Type** BATTMAN at the command prompt.
   
   Command: **BATTMAN**
   
   or

3. **Choose** Modify, Object, Attribute, Block Attribute Manager
   
   or

4. **Click** the Block Attribute Manager icon from the Modify II Toolbar
Synchronize Attributes 19.9

Updates all instances of a specified block with the current attributes defined for the block

1. **Open** a drawing with attributes.
2. **Type** ATTSYNC at the command prompt.
   Command: **ATTSYNC**
3. **Click** the Block Attribute Manager icon from the Modify II toolbar.
4. **Press** Enter an option [/?/Name/Select] <Select>:
   - enter and select a block with attributes.
5. **Press** ATTSYNC block computer? [Yes/No] <Yes>:
   - enter to synchronies. ATTSYNC complete.
Enhanced Attribute Extract 19.10

The Editor enables you to edit the attributes in an individual block as opposed to the Block Manager which is used to Block Definitions.

1. Open a drawing with block attributes.
2. Choose Tools, Attribute Extraction...
   or
3. Click the Attribute Extract icon from the Modify II toolbar.
4. Choose the Current Drawing radio button and Next.

5. Click Next to choose Xrefs and nested blocks from the Settings window.
6. Click Next to not choose an existing template.
7. Choose the Blocks and Attributes to extract and Next.
8. Choose the View output.

9. Click Next.

10. Save the file phone.xls

11. Open the template in Excel.
Chapter 20
Design Center and Tool Palettes
Design Center Overview 20.1

The AutoCAD Design Center finds and transfers blocks, text styles, layers, dimension styles, etc. from drawings, WEB

1. Choose Tools, AutoCAD Design Center.
   
   or

2. Press CTL+2 on the keyboard.
   
   or

3. Type ADCENTER at the command prompt.
   Command: adcenter
Design Center Blocks 20.2

1. **Choose** Blocks from one of the Design Center menus.

2. **Drag** and drop a block from the Design Center into a drawing.

**TIP:**
- Blocks with attributes will be prompted as they are inserted into the drawing.
Hatching from the Design Center 20.3

1. **Choose** a crosshatch pattern from the following AutoCAD directory
   \AutoCADxxxx\Support\acad.pat or \AutoCADxxxx\Backup

2. **Drag** and drop a pattern into a drawing.

**TIP:**
- Be sure the HPSCALE is set before dropping a hatch pattern into a drawing.
20.4 Tool Palettes

1. Choose Tool, Tool Palettes Window

2. Choose Palettes icon from the Standard Toolbar
Chapter 21
Point, Divide, Measure
Point Styles 21.1

Changes the appearance of points and point sizes.

1. Choose Format, Point Style...
or
2. Type DDPTYPE at the command prompt.

Command: DDPTYPE
Point Command 21.2

1. **Choose** Draw, Point, Single or Multiple Point.
   or
2. **Click** the Point icon.
   or
3. **Type** POINT at the command prompt
   Command: **POINT**
4. **Pick** A point on the drawing.
   Point (**point**)
Divide 21.3

1. **Choose**  Draw, Point, Divide.

   or

2. **Type**  
   Divide at the command prompt
   Command: DIVIDE

3. **Pick**  Object to divide
   Select object to divide: (pick one object)
   You can select a single Line, Arc, Circle, or
   polyline. If you enter a segment count between 2
   and 32,767, Point entities will be placed along
   the object to divide it into that number of equal
   segments.

4. **Type**  The number of equal segments to divide the
   object into<Number of segments>/Block:
   (number)

*Objects divided using points*
5. **Type** B to specify a block instead of a point to insert.

6. **Type** The name of the block to insert

   Block name to insert: (name)

7. **Type** Yes or No to align the block with an object

   Align block with object? Y or N

   Number of segments:

8. **Type** The number of equal segments to divide the object into<Number of segments>/Block:

   (number)

---

**TIP:** The Block must currently be defined within the drawing. If you answer yes to the Align block? prompt, the Block will be rotated round its insertion point so that it is drawn tangent to the object being divided.

*Objects divided using block symbols*
AutoCAD 2D Tutorial

Measure 21.4

1. **Choose** Draw, Point, Measure.
   or

2. **Type** MEASURE at the command prompt. Command: **MEASURE**

3. **Pick** Object to measure: Select object to measure: (pick one object)

4. **Type** The length of each segment along the object.
   
   `<Length of segment>/Block: (number)`
   or

5. **Type** B to specify a block instead of a point to insert.

*Points placed along measured distance (remaining length is on the right side of the line)*

[Diagram of points placed along measured distance]
Chapter 22
Grips
Grips Overview 22.1

Entity Grips

Entity grips allow AutoCAD drawings to be edited in an entirely new way. Without entering any edit commands, you can stretch, move, copy, rotate, scale, and mirror entities. You can also snap to geometric features such as endpoints, midpoints, centers, quadrants without entering object snaps.

Grips are the small squares that appear when objects are selected with the crosshairs directly from the command prompt.

Unselected Grip

An unselected grip is one that has not yet been picked with the cursor, but is an item in the current selection set (it is highlighted). Pick an object to see grips.
Selected Grip

A selected grip is the grip box that you select with the cursor to define the base point to edit from. It has a solid filled color and is the grip location that editing is done from.

*The red grip at the line endpoint is the selected grip*

Cancelling Grips

1. **Press** ESC to clear GRIPS.

**TIP:** If grips are visible on an object, pressing the DEL key or ERASE will delete the selected object.
How To Use Grips 22.2

1. **Pick** The objects you want to edit.

2. **Pick** One of the grips to use as the base grip.

3. **Press** the SPACE BAR, or RIGHT MOUSE BUTTON to cycle through the grip modes.

   or

4. **Type** The keyword for the mode you want: Stretch (ST) Stretch the objects. Move (MO) Move the objects. Rotate (RO) Rotate the objects. Scale (SC) Scale the objects. Mirror (MI) Mirror the objects.

5. **Drag** The mouse to perform the operation.

6. **Type** C to create a new copy of the selection set enter C.

7. **Type** X to exit Grip mode.
Copy Multiple with Grips 22.3

If you use the COPY option with any one of the edit commands, a temporary auxiliary snap grid is created. To invoke the grid, hold the SHIFT key after specifying the location of the first copy. AutoCAD then uses the X and Y offsets from the original entity to define the snap, grid, and rotation of the remaining entities.

*Holding the SHIFT Key while in Copy Mode will create a copied array of objects*
Grips Settings (DDGRIPS Command) 22.4

1. Choose Tools, Options...
   or
2. Type DDGRIPS at the command prompt.
   Command: DDGRIPS
3. Choose the Selection tab from the dialog box.
4. Choose the Grip setting to change.

Enable Grips
Enables the display of grips. AutoCAD stores this setting in the GRIPS system variable.
Enable Grips Within Blocks
Enables the display of grips on objects within blocks. If you disable this setting (but have Enable Grips selected), blocks are assigned one grip at their insertion point. Disable this setting to work on blocks with many objects. AutoCAD stores this setting in the GRIPBLOCK system variable.

Unselected
Sets the color of unselected (unfilled) grips. Choosing this button displays the Select Color dialog box, in which you set the grip color. AutoCAD stores the color in the GRIPCOLOR system variable.

Selected
Sets the color of selected (filled) grips. Choosing this button displays the Select Color dialog, in which you set the grip color. AutoCAD stores the color in the GRIPHOT system variable.

Grip Size
Changes the size of grips. To adjust the size of grips, move the slider box left or right. AutoCAD stores the pixel size (1-255) of the grips in the GRIPSIZEx system variable. Changes the size of grips. To adjust the size of grips, move the slider box left or right. AutoCAD stores the pixel size (1-255) of the grips in the GRIPSIZE system variable.
Chapter 23
Advanced Selection Commands
Selection Modes 23.1

1. **Choose** Tools, Options...

2. **Choose** the Selection TAB from the following dialog.

3. **Change** the settings as desired.

**Noun/Verb Selection**

Allows you to select an object before starting a command. The command affects the previously selected object or objects. You can also set this option by using the PICKFIRST system variable.

**Use Shift to Add to Selection**

Adds or removes an object to the selection set when you press SHIFT and select an object.

**Press and Drag**

Draws a selection window by selecting a point and dragging the pointing device to a second point.
Implied Windowing

Initiates the drawing of a selection window when you select a point outside an object.

Object Grouping

Selects all objects in a group when you select one object in that group. With GROUP you can create and name a set of objects for selection.

Associative Hatch

Determines which objects are selected when you select an associative hatch. If this option is selected, boundary objects are also selected when you select an associative hatch.
Groups 23.2

1. **Type** GROUP at the command prompt.
   **Command:** GROUP

2. **Type** a name for a new group.

3. **Choose** the New button under Create Group.

4. **Pick** objects to be included in the group.

5. **Press** ENTER when done choosing objects.

6. **Pick** OK.

---

**Lines in a group**

---

**Turning Groups ON/OFF**

At any time, toggle group selection on and off by pressing either
CTRL+H or SHIFT+CTRL+A.
Object Selection Cycling  23.3

It is difficult to select objects that are close together or lie directly on top of one another. The following example shows two lines and a circle that all lie within the selection pickbox.

1. **Press** the CTRL key before choosing objects at the Select Objects prompt.
2. **Pick** repeatedly in the area where multiple objects are located. AutoCAD will cycle through all objects that were touching the pickbox.
3. **Press** ENTER when the desired object highlights.
4. **Press** ENTER again.

Objects touching pickbox

First object selected highlights

Second object selected
Double-Click Edit 23.4

1. **Double-Click** an object to edit.
Draw Order 23.5

1. Choose Tools, Display Order.
   or
2. Click the Draworder Icon from the Modify II Toolbar.
   or
3. Type DRAWORDER at the command prompt.
   Command: DRAWORDER
   Select objects: pick an object.
Object Filters 23.6

1. **Type** FILTER at the Command prompt.
2. **Select** Line in the Object Selection Filters dialog box under Select Filter.
3. **Choose** Add to List.
4. **Choose** Apply.
5. **Type** ALL at the Select Objects prompt or select a window.

Command:
FILTER Applying filter to selection.
Select objects: all
9 found
6 were filtered out.
Quick Select 23.7

1. **Type** QSELECT at the command prompt.
   
   **Command:** QSELECT

2. **Enter** the selection criteria (i.e. TEXT HEIGHT < .5)

3. **Choose** OK.

**TIP:** AutoCAD puts those object(s) into a selection set. Use the "P" previous option to select these objects.
Layer Filters 23.8

1. **Choose** the layer dialog box.

2. **Choose** the three dots (...) to invoke the filter dialog for layers.

3. **Choose** the type of filter you would like to use (e.g. layer name = 1st*)
Point Filters 23.9

AutoCAD point filters allow the user to specify one coordinate, such as the X, with one pick and a second coordinate, such as the Y, with another pick. The point filters are .X, .Y, .XY,.XZ and .YZ. Only .X and .Y are used for two dimensional drawings.

1. **Type** A command that asks for a point.
   *Command:* CIRCLE

2. **Type** .X when AutoCAD asks for a point.
   3P/2P/TTR/<center point>: .X

3. **Pick** The point to filter (HINT: use osnaps)
   *of MID of point on x axis*

4. **Pick** The next point to filter
   (need YZ)
   *MID of point on y axis*

5. **Pick** A diameter or radius
   Diameter/<radius>: Pick or type a diameter

Circle center is placed at the intersection of the filters

X point filter

Y point filter
Chapter 24
External References
External Reference Files Overview

Attaches, overlays, lists, binds, detaches, reloads, unloads, renames, and modifies paths to external references (xrefs) in the current (or host) drawing.

1. Choose Insert, External Reference...
   or
2. Click the Xref Icon from the Reference Toolbar.
   or
3. Type XREF at the command Prompt. Command: XREF

The following are Xref characteristics:

- An external reference file is known as an “Xref”.
- Current drawing contains only a “pointer”, the path and filename, to the Xref.
- The current drawing does not increase much in size when it contains an Xref.
- The Xref is reloaded each time the current drawing is loaded, thus always showing the latest revision of the Xref.
- Xrefs import their linetypes, layers, text styles, dimstyles, views, ucs’s, vports, and blocks into their current drawing.
- Each Xref named object is prefixed with the xref drawing name and a pipe “|” symbol.
  (i.e. HOUSE|A-WALL for drawing house.dwg and layer a-wall)
- Xdep stands for external reference dependent objects.
- Xref's layers can be turned on/off in the current drawing.
- Layer zero(0) resides on layer zero(0) of the current drawing.
- Xrefs can be bound to the current drawing, in which case they become blocks.
- Xref layers cannot be made current the the drawing they are xreferenced into.
- Xrefs can be snapped to.
- Xref entities cannot be individually modified in the current drawing.
- Xrefs can be plotted.
- Xrefs can be detached from the current drawing and will disappear.
- The current drawing pointer, file and pathname can be changed.
- Xrefs can be re-loaded during the current drawing session.
- Xrefs can be nested.
- Xrefs can be clipped to show parts of the reference files.
Attaching Xrefs 24.1

Attaches, overlays, lists, binds, detaches, reloads, unloads, renames, and modifies paths to external references (xrefs) in the current (or host) drawing.

1. **Choose** Insert, External Reference
   - or -
2. **Type** XATTACH at the command prompt.
   - or -
3. **Click** the Xref Attach Icon from the Reference Toolbar.
4. **Choose** a drawing name to attach.
5. **Specify** the insertion parameters.
Xref Layers 24.2

Layer Dialog Box

- Each Xref named object is prefixed with the xref drawing name and a pipe "|" symbol. (i.e. HOUSE|A-WALL for drawing house.dwg and layer a-wall)

- Xdep stands for external reference dependent objects.

- Xref's layers can be turned on/off in the current drawing.

- Layer zero(0) resides on layer zero(0) of the current drawing.

- Xref layers cannot be made current the the drawing they are xreferenced into.
Xclip 24.3

Defines an xref or block clipping boundary and sets the front or back clipping planes.

1. **Choose** Modify, Clip, XRef  
   or

2. **Click** the Xclip Icon from the Reference Toolbar.  
   or

3. **Type** XCLIP at the command prompt.

   Command: **XCLIP**

   Select objects: Other corner: 1 found

   Select objects: **pick reference file**

   ON/OFF/Clipdepth/Delete/generate Polyline/

   <New boundary>:

   Specify clipping boundary:

   Select polyline/Polygonal/<Rectangular>: First corner:

   Other corner: **pick corners**

   Defining a Clipping Boundary
Xclipframe 24.4

Controls visibility of xref clipping boundaries.

1. **Choose** Modify, Object, External Reference.
   
   or

2. **Type** XCLIPFRAME at the command prompt.
   
   Command: XCLIPFRAME

   0  Clipping boundary is not visible

   1  Clipping boundary is visible

*Turning xclip frame on/off*
**AutoCAD 2D Tutorial**

**Binding an Xref 24.5**

Converts Xreference files to block definitions in the current drawing. Associated objects change names (i.e. the layer called HOUSE|A-WALL becomes HOUSE$0$A-WALL). Binding loses the connection to the referenced file. Xrefs can also be inserted like Wblocks.

**To Bind an Xref:**

1. **Choose** Insert, Xref Manager
2. **Choose** an xref name.
3. **Choose** the Bind option.
4. **Choose** Bind or Insert.
5. **Choose** OK.
The XBIND command is used to bind layers, blocks, linetypes, styles, and dimstyles of an attached xref without binding the entire xref.

1. **Choose** Modify, Object, External Reference, Bind...
   or

2. **Click** the Xbind Icon from the Reference Toolbar.

3. **Type** XBIND at the command prompt.

   Command: **XBIND**
   Block / Dimstyle / Layer / Linetype / Style:

![Xbind dialog box](image)
Detaching Xrefs

Detaches one or more xrefs from your drawing, erasing all instances of a specified xref and marking the xref definition for deletion from the symbol table.

1. Choose a drawing name to detach from the Xref Dialog.
2. Choose the Detach option.

Unload an Xref

Unloads one or more xrefs. Unloaded xrefs can be easily reloaded. Unlike detach, unloading does not remove the xref permanently. It merely suppresses the display and regeneration of the xref definition, to help current session editing and improvement of performance.

1. Choose a drawing name to unload from the Xref Dialog.
2. Choose the Unload option.
AutoCAD 2D Tutorial

Reload an Xref

Marks one or more xrefs for reloading. This option re-reads and displays the most recently saved version of the drawing.

1. Choose a drawing name to reload from the Xref dialog.
2. Choose the Reload option.

Opening Xrefs to Edit

1. Choose Modify, Xref and Block Editing, Open Reference.
   or
2. Choose Modify, Xref and Block Editing, Edit Xreference in Place.
3. Edit the objects as desired.
4. Save the edits with the following icons.
Overlay an Xref 24.8

Overlays are typically used when you need to view another drawing's geometry temporarily, but don't plan to plot using that data. In the following illustration, several people are working on drawings referenced by master.dwg. The person working on a.dwg needs to see the work being completed by the person working on b.dwg, but does not want to xref b.dwg because it would then appear twice in master.dwg. Instead, the person overlays b.dwg, which is not included when a.dwg is referenced by master.dwg.

1. **Choose** the Attach option from the Xref Dialog.
   or

2. **Click** the Xref Attach Icon from the Reference Toolbar.

3. **Choose** a drawing name to attach.

4. **Choose** Overlay in the Attach Xref dialog box under Reference Type.
5. **Specify** the insertion parameters.

![External Reference dialog box](image)
Inserting Images 25.1

1. **Choose** Insert, Raster Image...
2. **Choose** a raster image file to insert.
3. **Specify** a location to insert the image.

   **or**

4. **Type** IMAGEATTACH at the command prompt.
   
   Command: **IMAGEATTACH**

   **or**

5. **Click** the Image icon from the Reference Toolbar.
Image Appearance 25.2

Adjusting Image Appearance

1. Choose Modify, Object, Image, Adjust...
2. Choose a raster image file edit.
3. Choose options from the dialog box to adjust.
AutoCAD 2D Tutorial

Image Transparency

2. Choose a raster image file edit.
3. Type ON or OFF to turn an image’s transparency on or off.

Erasing Images

1. Click once on the image to remove.
2. Choose Edit, Cut.

Imagequality

1. Type IMAGEQUALITY at the command prompt.

Command: imagequality
Enter image quality setting [High/Draft] <High>:
Clipping Images 25.3

Chapter 26
Dimensioning
Linear Dimensions 26.1

1. **Choose** Dimension, Linear.
   or
2. **Click** the Linear Dimension command from the toolbar.
   or
3. **Type** DIM at the command prompt.
   Command: **DIM**
   Dim: HOR or VER
Aligned Dimensions 26.2

1. **Choose** Dimension, Aligned.
   
   or

2. **Click** the Aligned Dimension command from the toolbar.

   or

3. **Type** DIM at the command prompt.

   Command: **DIM**

   Dim: **ALIGNED**
Radial Dimensions 26.3

1. **Choose** Dimension, Radius or Diameter.
   
   or

2. **Click** the Radial Dimensions command from the toolbar.

3. **Type** DIM at the command prompt.
   
   Command: **DIM**
   
   Dim: **RADIUS** or **DIAMETER**
Angular Dimensions 26.4

1. Choose Dimension, Angular.
   or
2. Click the Angular Dimensions command from the toolbar.
   or
3. Type DIM at the command prompt.
   Command: DIM
   Dim: ANGULAR
Continued and Baseline Dimensions 26.5

1. **Choose** Dimension, Continue or Baseline.
   
   or

2. **Click** the Continue or Baseline Dimensions command from the toolbar.
   
   or

3. **Type** DIM at the command prompt.
   
   Command: **DIM**
   
   Dim: **CONTINUE or BASELINE**
Leaders 26.6

1. Choose Dimension, Leader... 
   or
2. Click the Leader icon from the Dimension toolbar. 
   or
3. Type QLEADER at the command prompt. 
   Command: QLEADER
Leader Settings

1. **Type**
   - QLEADER at the command prompt.
   - Command: **QLEADER**

2. **Type**
   - “S” at the QLEADER prompt to change the leader settings.

3. **Choose**
   - a setting from the following dialog box.
Quick Dimensions 26.7

Quickly creates dimension arrangements from the geometry you select.

1. **Choose** Dimension, QDIM.
   
   or

2. **Click** the Quick Dimension icon from the Dimensions toolbar.
   
   or

3. **Type** QDIM at the command prompt.
   
   Command: **QDIM**

4. **Pick** the objects to dimension.
Modifying Dimensions 26.8

DDEDIT

1. **Choose** Modify, Object, Text.
2. **Choose** the dimension text to modify.

**TIP:** The actual dimension is placed in brackets <>. Text can be placed in front of or behind these brackets. If text is placed between the brackets, the dimension loses its associative properties.

Stretching Dimensions

1. **Choose** Modify, Stretch.
2. **Choose** a crossing window around the area to stretch. Be sure to include the dimension endpoints.
DIMTEDIT

Moves and rotates dimension text

1. **Choose**  Dimension, Align Text. or
2. **Type**  DIMTEDIT at the command prompt.
   
   **Command:** **DIMTEDIT**
   
   **Select dimension:** select object
   
   **Enter text location (Left / Right / Angle):**

**Dimension Edit Commands**

- **HOMetext**  Moves the Dimension text back to its home (default) position.
- **NEWtext**  Modifies the text of the Dimensions.
- **Rotate**  Rotates dimension text.
- **OBlique**  Sets the obliquing angle of Dimension extension lines.
- **OVerride**  Overrides a subset of the Dimension variable settings.
- **UPdate**  Redraws the Dimensions as directed by the current settings of all dimensioning variables.
Ordinate Dimensions 26.9

1. Choose Dimension, Ordinate
   or
2. Type DIMORDINATE at the command prompt.
   Command: Dimordinate
Chapter 27
Dimension Styles
Creating Dimension Styles 27.1

1. **Choose** Format, Dimension Style...
   or
2. **Choose** Dimension, Style.
   or
3. **Choose** Dimension Style icon from the Dimension Style toolbar.

4. **Type** DDIM at the command prompt
   
   Command: **DDIM**

5. **Choose** New... from the dialog box.
6. **Create** a new style from the existing styles.

7. **Click** the Continue button.

**TIP:**

All dimension variables except for DIMSHO and DIMASO can be saved as a style.
Lines and Arrows 27.2

Edits Dimension Lines, Extension Lines, and Arrows.

1. **Pick** the Lines and Arrows tab from the Dimension Variables and Styles dialog box.
Text 27.3

Edits Text Appearance, Text Placement and Text Alignment.

1. **Pick** the Text tab from the Dimension Variables and Styles dialog box.
Primary Units 27.4

Edits Unit options for dimension’s primary units.

1. **Pick** the PRIMARY UNIT tab from the Dimension Variables and Styles dialog box.
Alternate Units 27.5

Edits Unit options for dimension’s alternate units.

1. **Pick** the ALTERNATE UNIT tab from the Dimension Variables and Styles dialog box.
Tolerances 27.6

Edits Unit options for tolerances.

1. **Pick** the TOLERANCES tab from the Dimension Variables and Styles dialog box.
Fit 27.7

Edits Unit options for fitting dimensions and dimension scales.

1. **Pick** the FIT tab from the Dimension Variables and Styles dialog box.
Dimscale 27.8

Edits Unit options for fitting dimensions and dimension scales.

1. **Pick** the FIT tab from the Dimension Variables and Styles dialog box.
Dimension Override 27.9

1. **Choose**  Dimension, Override.
2. **Type**   a dimension setting to change (i.e. DIMSE1 which suppresses the first extension line).
   
   Command: `dimoverride`
   
   Enter dimension variable name to override or [Clear overrides]: **dimse1**

3. **Set**   the new value.
   
   Enter new value for dimension variable <Off>: **on**

4. **Press**  enter.

5. **Pick**   the dimension to override.
1. **Type** 

   **SETVAR at the command prompt.**

   **Command:** SETVAR

   Enter variable name or [?] : ?

   Enter variable(s) to list <*> : **dim**

   - DIMADEC = 0
   - DIMALT = OFF
   - DIMALTD = 2
   - DIMALTF = 25.4000

Views and Viewports
Named Views 28.1

Ddview Command

1. **Choose** View, Named Views...
   
   *or*

2. **Click** the Named View icon from the View toolbar.

3. **Type** DDVIEW at the command prompt.

   Command: **DDVIEW**

4. **Choose** the NEW button.

5. **Type** a view name.

6. **Choose** Current display or Define Window.
AutoCAD 2D Tutorial

Typing the View Command

1. **Type** View at the command prompt. Command: \-VIEW
2. **Type** One of the following view options:
   - `/Delete/Restore/Save/Window:

View options:

- **?** Lists the named views for this drawing
- **Delete** Deletes the named view
- **Restore** Displays the specified view
- **Save** Attaches a name to the current view of the drawing
- **Window** Attaches a name to specified window

Plotting Named Views
AutoCAD 2D Tutorial

Viewports 28.2

Vports Command

1. Choose View, Viewports, New Viewports...
2. Choose one of the viewports configurations
3. Click OK.
4. Click once in each vport to make it active.
5. Type a ZOOM option in each viewport.
## Viewport options

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>New Name</strong></td>
<td>Gives a name to a viewport</td>
</tr>
<tr>
<td><strong>Restore</strong></td>
<td>Restores an original viewport</td>
</tr>
<tr>
<td><strong>Delete</strong></td>
<td>DEL deletes a viewport</td>
</tr>
<tr>
<td><strong>Join</strong></td>
<td>Joins two viewports together</td>
</tr>
<tr>
<td><strong>Single</strong></td>
<td>Creates on viewport in the drawing</td>
</tr>
</tbody>
</table>

**TIPS:**

Viewports can be named and restored later.

AutoCAD plots only the current vport.
Creating a Layout 29.1

1. **Choose** the Layout1 TAB at the bottom of the screen.

2. **Change** the name of the layout using the Layout Wizard

3. **Change** the remaining Layout options for page setup and plots.
Paper Space Layout with One View and Inserted Title Block
Creating Multiple Layouts 29.2

1. **Choose** the Layout2 TAB at the bottom of the screen.
   
   ![Command: Switching to: Layout2 Regenerating layout.]

2. **Change** the name of the layout.

3. **Change** the remaining Layout options for page setup and plots.

![Page Setup - 17x11Plot](image)
Mview Command 29.3

- The MVIEW command controls the size and position of the mview viewports (from now on called mviews). Mview is to tilemode = 0 as vports is to tilemode = 1.
- Use mview when you would like to see a view of the model.
- Pspace mode must be active to use mview. AutoCAD will automatically switch to pspace when you issue the mview command.
- The default mview option is "<<first point>>". To use this option, pick a point which represents one corner of the mview. At the "other corner" prompt, pick a point which represents the opposite corner of the mview.

1. **Choose** View, Viewports, 1 Viewport.
   or
2. **Type** Type MVIEW at the command prompt.

Command: **MVIEW or MV**

ON/OFF/Hideplot/Fit/2/3/4/Restore/<<First Point>>:
P1
Other corner: P2

**TIP:** Mviews should be created on their own layers in order to be turned ON/OFF.
Irregular Shaped Viewports 29.4

1. **Draw** a shape in Paper Space (e.g. circle, polygon, ellipse)
2. **Choose** View, Viewports, Object
3. **Choose** the object to make a viewport.
Model Space 29.5

MSPACE (model space) can only be activated if there is at least one mview. To enter model space mode use "MSPACE".

1. **Type** MSPACE at the command prompt.  
   Command: **MSPACE** or **MS**  
   or

2. **Double-Click** the word "PAPER" on the Status Bar to toggle to model space.

   ![Model Space Diagram]

Notice the ucsicon will appear in each of the mviews when you enter model space.
Paper Space 29.6

PSPACE mode should be entered to create a border, a title, mviews, and annotations only. This environment is used to lay out a 2 dimensional working drawing suitable for plotting. When you plot from pspace, you should plot 1=1.

1. **Type**  
   PSPACE at the command prompt.  
   Command: **PSPACE** or **PS**
   
   or

2. **Double-Click**  
   the word “MODEL” on the Status Bar to toggle to paper space.

Notice the "Paper" in the status line and the pspace icon.
Scales - Zooming in Model Space 29.7

- Use ZOOM "XP" to zoom the model a certain factor of the paper.
- If you enter a value followed by xp, AutoCAD specifies the scale relative to paper space units. For example, entering .5xp displays model space at half the scale of paper space units.
- If you want to plot the model at 1/4"=1’, type ZOOM 1/48XP. If you want to plot a part at 3 times, type ZOOM 3XP.
- Views can also be shown in 3D by using the VPOINT command.

1. **Type** MS at the command prompt to enter Model Space for each individual viewport.
2. **Type** ZOOM at the command prompt. Command: ZOOM All/Center/Dynamic/Extents/Previous/ Scale(X/XP)/Window/<Realtime>: 3XP

You can also change the scale from the Viewports Toolbar.
Adding Text in Paper Space 29.8

Title block text and miscellaneous text can be added in Paper Space.
Plotting all MVIEWS should be done from Paper Space not from Model Space.

When you plot from pspace, you should plot1=1.

For hidden line removals, remember to use the HIDEPLT option in the MVIEW command.

Once a ZOOM SCALE has been defined, do not zoom again before plotting. You can change the display with the PAN command.

![Plotting in Paper Space](image)
AutoCAD 2D Tutorial

Layout Wizard 29.10

1. **Choose**  Insert, Layout, Layout Wizard

2. **Change**  the various options in the Layout Wizard.

---

**Create Layout - Begin**

- Begin
- Printer
- Paper Size
- Orientation
- Title Block
- Define Viewports
- Pick Location
- Finish

This wizard provides you the ability to design a new layout. You can choose a plot device and plot settings, insert a title block and specify a viewport setup. When you have completed the wizard, the settings will be saved with the drawing. To modify those settings, you can use the Page Setup dialog from within the layout.

Enter a name for the new layout you are creating:

Size: Architectural Plan

**Create Layout - Printer**

- Printer
- Paper Size
- Orientation
- Title Block
- Define Viewports
- Pick Location
- Finish

Select a configured plotter for the new layout:

- None
- HP LaserJet 1100 (SFM)
- Acudrat POP-V Nat
- Default Windows System Printer.pc3
- DWS8 epPlot.pc3
- PublishToWeb.png.pc3
- PublishToWeb.png.pc3

---
AutoCAD 2D Tutorial

Create Layout - Define Viewports

To add viewports to the layout, specify the setup type, scale, and if applicable the rows, columns, and spacing.

Viewports:
- None
- Single
- Std. 3D Engineering Views
- Array

Rows: 2
Columns: 2
Spacing between rows: 0.1
Spacing between columns: 0.1

Create Layout - Finish

You have created a layout named "Soda Architecture." To modify the settings you applied in this wizard, you can select the new layout tab, then use the Paper Setup dialog to revise any of the existing settings.
Tilemode 29.11

Tilemode is an AutoCAD system variable which can be set to 0 or 1. When tilemode is set to "1", viewports act as they traditionally did, like floortiles. Each viewport butts up against the next. The viewports fill the screen. They can only be plotted one at a time. These traditional viewports are known as "tiled areas of the screen". This is the default setting.

1. **Type** TILEMODE at the command prompt.
   
   Command: TILEMODE
   
   New value for tilemode <1> : Press ENTER

When tilemode is set to "0". The new metaview (mview) viewports can be used. Mviews can be any size or place on the screen. They may overlap. More than one mview can be plotted at a time. Each mview can be quickly turned on or off.

1. **Type** Command: TILEMODE
   
   New value for tilemode <1> : 0
AutoCAD 2D Tutorial

Viewport Layers 29.12

VPLAYER (viewport layer) controls layers on and off, and freeze and thaw, for each mview. Layer controls the on and off, freeze and thaw, globally. Layers must be on and thawed globally before they can be effected per mview with vplayer.

1. **Click** in the viewport to change layer status.
2. **Choose** the layer dialog box.
3. **Highlight** the layer to freeze or thaw in the current or new viewport.

The layer dialog box also allows control of layers for each viewport.
Files 30.1

1. **Choose** Tools, Options...
2. **Click** the Files TAB.
Display 30.2

1. **Choose** Tools, Options...
2. **Click** the Display TAB.
Open and Save 30.3

1. **Choose** Tools, Options...

2. **Click** the Open and Save TAB.
Plotting 30.4

1. Choose Tools, Options...
2. Click the Plotting and Save TAB.
1. **Choose** Tools, Options...
2. **Click** the System TAB.
User Preferences 30.6

1. Choose Tools, Options...
2. Click the User Preferences TAB.
Drafting 30.7

1. Choose Tools, Options...
2. Click the Drafting TAB.
Selection 30.8

1. Choose Tools, Options...
2. Click the Selection TAB.
Chapter 31
Drawing Utilities
AUDIT 31.1

1. **Choose** File, Drawing Utilities, Audit.

    or

2. **Type** Audit at the command prompt
   
   Command: **AUDIT**

3. **Type** Yes or No to fix any errors
   
   Fix any errors detected? <N>: Y or N

If a drawing contains errors that AUDIT can't fix, use the RECOVER command to retrieve the drawing and correct its errors.
RECOVER 31.2

1. **Choose** File, Drawing Utilities, Recover....
   
or
   2. **Type** RECOVER at the command prompt

   Command : RECOVER

The RECOVER command performs recoveries or audit operations on DWG files only. Performing a recover on a DXF file will only open the file.
PURGE 31.3

1. **Choose** File, Drawing Utilities, Purge.
   
   **or**

2. **Type** PURGE at the command prompt

   Command: **PURGE**

3. **Type** One of the following purge options:

   Purge unused Blocks/Dimstyles/LAyers/LTypes/SHapes/STyles/Mlinestyles/All:
1. Choose Format, Rename...
   or

2. Type RENAME at the command prompt
   Command: RENAME

3. Choose One of the following options to rename: Block / Dimstyle / Layer / LType / Style / Ucs / View / VPort:

4. Type The old object name
   Old (object) name: Enter the old name

5. Type The new object name
   New (object) name: Enter the new name
Chapter 32
Data Management
Importing Files 32.1

1. **Choose** File, Open
   - or
2. **Choose** Insert, 3D Studio, ACIS, DXB, WMF, or ESP
   - or
3. **Type** Import at the command prompt.
   
   Command: **Import**
Exporting Files 32.2

1. Choose File, Saveas or
2. Choose File, Export
Chapter 33
Object Linking and Embedding
Copying from AutoCAD 33.1

1. **Launch** a Windows program to link to (e.g. Microsoft Word)
2. **Open** an AutoCAD drawing.
3. **Choose** Edit, Copy.
4. **Pick** the AutoCAD objects to copy.
5. **TAB** to the Window’s program.
6. **Choose** Edit, Paste.
Print Screen 33.2

1. **Launch** a Windows program to link to (e.g. Microsoft Word)
2. **Open** an AutoCAD drawing.
3. **Press** PRINT SCREEN on the keyboard.
4. **TAB** to the Window’s program.
5. **Choose** Edit, Paste.
OLE Linking to AutoCAD 33.3

A linked object remains associated with its source file. When you edit a linked object in AutoCAD, the source file changes. When you edit the object in the source file, the linked object in AutoCAD changes.

1. **Launch** a Windows program to link from (e.g. Microsoft Excel)
2. **Create** a spreadsheet to bring into AutoCAD.

3. **Open** an AutoCAD drawing.
4. **Choose** Insert, OLE Object.
5. **Choose** browse to pick a file to link to AutoCAD.
6. **Pick** a location in the drawing to place the OLE object.
7. **Double Click** to edit that object in the original program.

**TIPS:**

- Spreadsheets that are imported into AutoCAD drawings with OLE are limited in size. If your spreadsheet is too large, you can reduce the column width and row height, reduce the font size, or paste the spreadsheet in separate parts to break the OLE object into smaller OLE objects.

- OLE objects are inserted in an AutoCAD drawing on the current layer. Turn off or freeze a layer to suppress the display of OLE objects on that layer.

- Set the system variable OLEHIDE to display or suppress the display of all OLE objects in paper space, model space, or both.
Hyperlinking 33.4

1. **Choose** Insert, Hyperlink
   or
2. **Press** CTRL + K
   or
3. **Type** HYPERLINK at the command prompt
   Command: **hyperlink**
4. **Select** the object to hyperlink
   Select objects: 1 found
5. **Choose** an option in the hyperlink dialog box.
AutoCAD 2D Tutorial

Opening a Hyperlink 33.4

1. **Move** the cursor to the object with the hyperlink.
2. **Click** with your right mouse button.
3. **Choose** Hyperlink from the menu.
4. **Open** the file from the menu.
Chapter 34
Communication and Collaboration Tools
34.1 Plotting to the WEB

1. **Type** `PLOT` at the command prompt.
   
   **Command:** `plot`

2. **Choose** the Plot Device TAB.

3. **Choose** the dropdown list for Plotter Configuration.

4. **Plot** to a .DWF, JPG, or PNG file.

- **DWF format** does not compress the drawing file.
- **JPEG format** uses lossy compression; that is, some data is deliberately discarded to greatly reduce the size of the compressed file.
- **PNG (Portable Network Graphics) format** uses lossless compression; that is, no original data is sacrificed to reduce the size of the file.
34.2 Configuring DWF Files

1. **Type** PLOT at the command prompt.
   
   **Command:** `plot`

2. **Choose** the DWF plot configuration option.

3. **Choose** the **Properties...** button.

4. **Choose** Custom Properties.

5. **Slide** the slider bar to extreme for a clearer resolution on the DWF file.
34.3 Publish Command

1. **Choose** the Publish to WEB icon from the Standard Toolbar.  
   or

2. **Choose** File, Publish

3. **Type** PUBLISH at the command prompt.

   Command: `publish`
34.4 Publishing WEB Pages

1. **Choose**  
   File, Publish to WEB.
   
   or

2. **Type**  
   PUBLISHTOWEB at the command prompt.
   
   Command: **PUBLISHTOWEB**

3. **Click**  
   Create New Web Page and Next.

4. **Specify**  
   a name for the WEB page, location and description for the new WEB page and click Next.  
   (NOTE: Save the WEB pages to C:\TEMP)
4. Select PNG as the image type for the drawings and Image Size "Medium" and click Next.

NOTE: If you have the Express Viewer loaded, you can pick DWF files to view. This will allow you to zoom and pan the drawings.

5. Select **Array of ThumbNails** as the Template type and click Next.
AutoCAD 2D Tutorial

6. **Select** a Theme (color) and click Next.

![Image of Publish to Web - Apply Theme window]

7. **Select** Enable i-drop and Click Next

![Image of Publish to Web - Enable i-drop window]
8. **Select** drawings and/or layouts to place on the WEB page.

9. **Click** Regenerate all images and Next.
10. **Click** Preview and Finish.
34.4 e-Transmit

1. **Type**  
   **ETRANSIT** at the command prompt. 

   **Command**: `etransmit`

   ![Image of Create Transmittal dialog box](image)

   **e-Transmit options**

   - **.EXE** (files are self extracting)
   - **.ZIP** (PKZIP or WINZIP is needed to extract files)
34.6 i-Drop

i-drop allows users to drag a drawing from an i-drop handle on an i-drop supported WEB site to an open AutoCAD drawing. Choose the i-drop option when publishing to the WEB to create an i-drop enabled WEB page.

1. Type http://www.autodesk.com/idrop to learn more about Autodesk’s i-drop technology.
Chapter 35
AutoCAD WEB Viewers
AutoCAD 2D Tutorial

AutoCAD DWF Viewer 35.1

1. **Launch** Your WEB Browser.
2. **Type** [http://www.autodesk.com/products](http://www.autodesk.com/products)
3. **Click** on Autodesk DWF View from the list of Autodesk products.
4. **Browse** the site for information or to download a free copy of the DWF Viewer.
Volo View 35.2

1. **Launch** Your WEB Browser.
3. **Click** Volo View to learn more about the Volo View application.
1. Launch Your WEB Browser.
2. Go to http://www.cadviewer.com/
AutoCAD 2D Tutorial

Internet Explorer 35.5

1. **Launch** Internet Explorer 5.0 or later.
2. **Choose** File, Open.
3. **Browse** to C:\TEMP and open a .DWF file to view.
AutoCAD Related WEB Sites 35.6

1. **Launch**
   Web sites to access.

2. **Click**
   on one of the following WEB sites.
   
   or

3. **Search**
   for AutoCAD related topics on the
   Internet on an Internet search engine

http://www.cadalog.com
http://www.cadalyst.com/
http://www.cadsoftware.com/
http://www.3dcafe.com/
http://www.mcneel.com
http://www.caddepot.com/
http://www.caddigest.com/
Menu Loading 36.1

1. **Type**
   MENU at the command prompt.
   
   **Command:** Menu

2. **Choose**
   a menu (mnu) file to load.
Creating New Menu Files 36.2

1. Copy ACAD.MNU to a new file name such as MYACAD.mnu
2. Type MENU at the command prompt to load the new menu.

Command: MENU
Menuload 36.3

1. **Choose** Tools, Customize, Menus...
   or
2. **Type** MENULOAD at the command prompt.
   Command: **MENULOAD**
3. **Choose** the Menu Bar Tab.
4. **Choose** Add or Remove to modify the appearance of the Pulldown menu.
Create New Toolbars

1. **Choose** View, Toolbars... or
2. **Type** TBCONFIG or TOOLBAR at the command prompt.
   **Command:** TBCONFIG or TOOLBAR

3. **Choose** the New...button.
4. **Type** the name of the new toolbar.
5. **Click** OK.
6. Choose the Commands...TAB.

7. Drag commands from each menu and drop onto your toolbar.

**TIP:** To copy a tool from another toolbar, press and drag the tool to the new toolbar.

8. Choose Close to close the Customize dialog box.
User Defined Buttons 36.5

1. Choose View, Toolbars...
2. Choose the Commands...TAB.
3. Click User Defined from the Categories section.
4. Drag a user defined button to your toolbox.
5. Double Click the new button.
   The Button Properties dialog box will appear.
6. Choose Edit...from the Button Properties window.
7. **Draw** the desired symbol by using the draw tools.
8. **Close** the Button Editor (save if necessary).
9. **Press** Apply.

10. **Close** the button properties window by selecting the X in the upper right corner.
11. **Close** the Toolbars window.
Macros 36.6

1. Click Your right mouse button on the button you wish to modify or create.
2. Type the macro command in the macro window.

Macro that inserts a block called chair

TIPS:
• Use ^C^C to cancel any previous AutoCAD command
• apostrophe (’) will issue a transparent command
• Use a semicolon (;) to separate a series of commands
• a dash (-) will issue the command without a dialog box.
Characters Used in Macros 36.7

Pausing for User Input Example

To accept input from the keyboard or the pointing device in the middle of a menu macro, place a backslash (\) at the point where you want input.

<table>

Chapter 37
External Applications and LISP Routines
AutoCAD searches for support files in the order specified by the library path, as follows:

Current directory. (This is typically determined by the “Start In” setting in your shortcut icon.)

Directory that contains the current drawing file.

Directories listed in the search path specified in OPTIONS. For more information about the Support path, see Specifying Search Paths, File Names, and File Locations in chapter 3 of the User’s Guide.

Directory that contains the AutoCAD program files.
External Applications and Lisp Routines 37.2

LISP and ARX routines are 3rd party applications and routines that can be loaded and used in AutoCAD.

AutoLISP applications are stored in ASCII text files with the .lsp extension. These files generally have a header portion that describes a routine, its use, and any specific instructions. This header might also include comments that document the author and the legal information regarding the use of the routine. Comments are preceded by a semicolon (;). You can view and edit these files with a text editor or word processor that can produce an ASCII text file.

The following are sites that explain LISP programming and LISP routines in more detail. There are also numerous books available on the subject.

AutoLISP Web Sites

AFRA LISP [http://www.afralisp.com/] (my favorite for explaining LISP and showing sample routines)

Architectural Computer Modeling Services (http://www.acms-cad.com/lisp.htm)

Autodesk [http://www.autodesk.com]

CADalog [http://www.cadalog.com/]

SimpleCAD [http://www.simplecad.com/]

Loading a LISP Routine or Application 37.3

Loading LISP Files

1. **Type**  APPLOAD at the command prompt.  
   Command: **APPLOAD**
2. **Choose**  the routine to load
3. **Type**  the name of the routine at the command prompt.
Loading Menus with LISP Routines

1. **Type** MENU at the command prompt.
   
   Command: **MENU**

2. **Choose** the menu to load

3. **Check** file search path to be sure the files are in one of the folders.
Chapter 38
Slide Shows
Creating Slides 38.1

MSlide Command

1. Type **MSLIDE** at the command prompt.
   Command: **MSLIDE**

2. Type the name of the slide file (and location).
Viewing Slides 38.2

1. Type VSLIDE at the command prompt.
   Command: VSLIDE
2. Pick the name of the slide file (and location).
In a Word Processor, create a series of commands to execute in AutoCAD.

Save the script file with an extension called .SCR.

**Pausing a Slide**

1. **Type** `DELAY` at the command prompt.

   **Command:** `DELAY`

   Enter delay time (in milliseconds): **3000**

   NOTE: 3000 milliseconds is 3 seconds
AutoCAD 2D Tutorial

Running a Script in AutoCAD

1. Type SCRIPT at the command prompt.
   Command: SCRIPT

2. Pick the script name to run.

Repeating a Script

1. Type RSCRIPT at the command prompt.
   Command: RSCRIPT
   This will repeat the script command lines continuously.
Chapter 39
CAD Standards
39.1 Drawing Standards (.DWS) Files

Standards define a set of common properties for named objects such as layers and text styles. You or your CAD manager can create, apply, and audit standards in AutoCAD drawings to enforce consistency. Because standards make it easier for others to interpret drawings, standards are particularly useful in collaborative environments, where many individuals contribute to the standards.

1. **Open** a drawing with standards defined (i.e. AIALayersSampleDrawing.dwg)
2. **Type** SAVEAS at the command prompt. Command: *saveas*
3. **Choose** .DWS as the file type to save.
4. **Save** the drawing standard file.
39.2 CAD Standards Manager

1. **Choose** Tools, CAD Standards, Configure... or
2. **Type** STANDARDS at the command prompt.
   
   Command: `standards`

3. **Choose** Add standards button to add a standards file (aialayer.dws)

4. **Open** a drawing to check its standards (i.e. HBH-G.dwg)

5. **Load** the CAD standards AIALayer.DWS file.

6. **Choose** Checkstandads... or

7. **Type** CHECKSTANDARDS at the command prompt.
   
   Command: `checkstandards`

8. **Choose** the fix button to make changes to the existing drawing.
39.3 Layer Translator

1. **Type** LAYTRANS at the command prompt.
   
   **Command:** laytrans
   
   or

2. **Choose** Tools, CAD Standards, Layer Translator.

3. **Choose** Load... to load standards from a .DWS or .DWG file.

4. **Match** the layers in the current drawing to the layers in the .DWG or .DWS file.
39.4 Batch Standards Checker

Performs batch checking on multiple drawings outside of AutoCAD's drawing editor.

1. **Choose** Start, Programs, AutoCAD 2000x, Batch Standards Checker.

2. **Load** multiple drawings to check.

3. **Compare** to an existing standards file (i.e. aialayers.dws).
4. **Save** the standards audit as a file (.chx)
39.5 Redline Markup Language

1. Choose Insert, Markup...

2. Pick a markup language file to insert.

TIPS:

Markups range from hyperlinks to simple boxes and circles. Created in programs such as VoloView

A new "MARKUP" layer is created in the current drawing.
39.6 Revision Cloud

1. **Choose** Draw, Revcloud
    
    or

2. **Type** REV CLOUD at the command prompt.
   
   Command: revcloud
   
   Minimum arc length: 0.5000
   
   Maximum arc length: 0.5000
   
   Specify start point or [Arc length/Object]
   
   <Object>: Guide crosshairs along cloud path...
   
   Revision cloud finished.
    
    or

3. **Click** the Revcloud icon from the draw menu. 

![Cloud Drawing]
39.8 Wipeout

Creates a polygonal area that masks underlying objects with the current background color. This area is bounded by the wipeout frame. You can turn on the wipeout frame for editing and turn it off for plotting.

1. **Choose** Draw, Wipeout
   
   or

2. **Type** WIPEOUT at the command prompt.
   
   Command: `_wipeout`
   
   Specify first point or [Frames/Polyline] <Polyline>:
   
   Select a closed polyline:
Chapter 40
Isometrics
Isometric Cursor 40.1

1. Choose Tools, Drawing Aids...
   or

2. Type DDRMODES at the command prompt.
   Command: DDRMODES

3. Toggle Isometric Snap/Grid to ON.
Isoplane Toggle 40.2

1. **Press** Function Key F5 to toggle
   <Isoplane Top>
   <Isoplane Left>
   <Isoplane Right>
   
or

2. **Press** **CTRL + E** to toggle isoplanes.
Isometric Circles 40.3

1. **Type** ELLIPSE at the command prompt. 
   Command: **ELLIPSE** or **EL**
   Arc/Center/Isocircle/<Axis endpoint 1>: I Center of circle: <Isoplane Top>
   <Circle radius>/Diameter:
Isometric Text 40.4

1. **Type** STYLE at the command prompt
   Command: **STYLE**

2. **Type** RISO as a style name
   Text style name (or ?) **RISO**

3. **Pick** A font file
   Font file: **Romans.shx**

4. **Type** Zero(0) for the text height
   Height <0> **0**

5. **Type** .85 for the character width factor
   Width factor: **.85**

6. **Type** 30 degrees for an obliquing angle
   Obliquing Angle: **30**

7. **Type** NO to Backwards, Upside Down, and Vertical

8. **Type** DTEXT at the command prompt
   Command: **DTEXT**

9. **Pick** A start point
   Justify/Style/<Start point>: **pick**

10. **Type** 30 for the rotation angle
    Rotation angle: **30**

11. **Type** A string of text
    Text: (text string)

12. **Press** ENTER to end the text command
## AutoCAD 2D Tutorial

<table>
