

TAXONOMY	
Family Names	
Family Scientific Name:	<i>Rubus lasiococcus</i>
Family Common Name:	Rose Family
Scientific Names	
Genus:	<i>Rubus L.</i>
Species:	<i>Rubus pedatus</i>
Species Authority:	Sm
Common Name(s):	Strawberryleaf raspberry (2) Five leafed Bramble (1) Creeping Raspberry (1) Trailing Raspberry (3)
Species Code	RUPE (2)
GENERAL INFORMATION	
Ecological distribution	Moist, mossy forest, glades, stream banks, bog forest.
Climate and elevation range	low to subalpine elevations (1)
Local habitat and abundance	Woodland, Sunny Edge, Dappled Shade. (5)
Plant characteristics	White flowers and leafs look like 5 toed prints (1)
PROPAGATION DETAILS	

Propagation Method	Spores (3)
Time to Grow	Nothing really said specific details but it sounded like it took about two years between the planting of the seeds to when they can be outplanted.
Target Specifications	A deciduous shrub growing to 0.25m by 2m. (5)
Pre-Planting Propagule Treatments	requires stratification and is best sown in early autumn in a cold frame. Stored seed requires one month stratification at about 3°C and is best sown as early as possible in the year. (5)  Prick out the seedlings when they are large enough to handle and grow on in a cold frame. Plant them out into their permanent positions in late spring. (5)
Growing Area	Moist areas, open banks to dense forests, near sea level to timberline (4)
Establishment Phase	Blooms May through early July (4)
Other Comments	-I wonder if this species was once called by a different name because it is hard to find any sources that have information about this species.  -Reference #5 is not that credible but it had some of the most knowledge about this species.
