Arnica frigida
Snow Arnica
(Credit: Allen Charlier)

TAXONOMY	
Plant Family	
Scientific Name	Asteraceae (1)
Common Name	Sunflowers
Species Scientific Name	
Scientific Name	<i>Arnica frigida</i> C.A. Mey. Ex. Iljin Snow Arnica

Varieties	<p><i>Arnica</i> × <i>diversifolia</i> Greene (pro sp.) [<i>amplexicaulis</i> or <i>mollis</i> × <i>cordifolia</i> or <i>latifolia</i>] - rayless arnica</p> <p><i>Arnica</i> <i>acaulis</i> (Walter) Britton, Sterns & Poggenb. - common leopardbane</p> <p><i>Arnica</i> <i>alpina</i> (L.) Olin [excluded]</p> <p><i>Arnica</i> <i>amplexicaulis</i> Nutt. - clasping arnica</p> <p><i>Arnica</i> <i>angustifolia</i> Vahl - narrowleaf arnica</p> <p><i>Arnica</i> <i>cernua</i> Howell - serpentine arnica</p> <p><i>Arnica</i> <i>chamissonis</i> Less. - Chamisso arnica</p> <p><i>Arnica</i> <i>cordifolia</i> Hook. - heartleaf arnica</p> <p><i>Arnica</i> <i>dealbata</i> (A. Gray) B.G. Baldw. - mock leopardbane</p> <p><i>Arnica</i> <i>discoidea</i> Benth. - rayless arnica</p> <p><i>Arnica</i> <i>fulgens</i> Pursh - foothill arnica</p> <p><i>Arnica</i> <i>gracilis</i> Rydb. - smallhead arnica</p> <p><i>Arnica</i> <i>lanceolata</i> Nutt. - lanceleaf arnica</p> <p><i>Arnica</i> <i>latifolia</i> Bong. - broadleaf arnica</p> <p><i>Arnica</i> <i>lessingii</i> Greene - nodding arnica</p> <p><i>Arnica</i> <i>lonchophylla</i> Greene - longleaf arnica</p> <p><i>Arnica</i> <i>longifolia</i> D.C. Eaton - spearleaf arnica</p> <p><i>Arnica</i> <i>louiseana</i> Farr - Lake Louise arnica</p> <p><i>Arnica</i> <i>mollis</i> Hook. - hairy arnica</p> <p><i>Arnica</i> <i>montana</i> L. - mountain arnica</p> <p><i>Arnica</i> <i>nevadensis</i> A. Gray - Nevada arnica</p> <p><i>Arnica</i> <i>ovata</i> Greene - sticky leaf arnica</p> <p><i>Arnica</i> <i>parryi</i> A. Gray - Parry's arnica</p> <p><i>Arnica</i> <i>rydbergii</i> Greene - Rydberg's arnica</p> <p><i>Arnica</i> <i>sororia</i> Greene - twin arnica</p> <p><i>Arnica</i> <i>spathulata</i> Greene - Klamath arnica</p> <p><i>Arnica</i> <i>unalaschensis</i> Less. - Alaska arnica</p> <p><i>Arnica</i> <i>venosa</i> H.M. Hall - Shasta County arnica</p> <p><i>Arnica</i> <i>viscosa</i> A. Gray - Mt. Shasta arnica</p> <p>(3)</p>
Sub-species	<p><i>Arnica frigida</i> has no subspecies. It is the subspecies of <i>Arnica griscomii</i> (6)</p>
Cultivar	<p>None. Plant is mostly found in its natural habitat.</p>
Common Synonym(s)	<p><i>Arnica frigia ssp.griscomii</i></p> <p><i>Arnica louiseana ssp.griscomii</i></p> <p><i>Arnica louiseana var. griscomii</i></p> <p>(7)</p>
Common Name(s)	<p>Frigid arnica</p> <p>Snow arnica</p> <p>Snow Leopardbane</p> <p>Lake Louise Arnica</p> <p>(5)</p>

Species Code (as per USDA Plants database)	ARFR2
GENERAL INFORMATION	
Geographical range	 (9)
Ecological distribution	Extreme northern British Columbia and western Northwest Territories east through the Yukon Territory and most of Alaska except Alaskan Peninsula, Aleutians, and the SE Panhandle (4)
Climate and elevation range	Climate: Cold, alpine climates; cool temperatures, well-drained soils, and sunlight. Tolerates <i>some</i> shade but grows best in sunny areas. Well-suited to alpine and subarctic environments (3) Elevation: 0 – 4900+ ft (8)
Local habitat and abundance	Alpine, dry, gravelly and rocky areas, gravelly roadsides and slopes (4)
Plant strategy type / successional stage	Stress-tolerator
Plant characteristics	Group: Dicot Duration: Perennial Habit: Forb/herb Root Type: Tap Size: 2-16 inches Fruit: Fruit is a cypsela Bloom Color: Yellow Bloom Time: Jul, Aug (5)
PROPAGATION DETAILS	
Ecotype	Dry rocky slope in foothills of Alaska. Range near Healy, AK (4)
Propagation Goal	Plants (4)
Propagation Method	Seed (4)
Product Type	Container (plug) (4)

Stock Type*	116 mL conetainers (10)
Time to Grow*	7 months (10)
Target Specifications	Multiple leaves, firm root plug (4)
Propagule Collection Instructions	Hand-picked when seeds ripen in early to mid-July in interior Alaska (4)
Propagule Processing/Propagule Characteristics	Pappus hairs removed with Westrup LA-H, screened, and air-blown Seed per Pound: 340200 (4)
Pre-Planting Propagule Treatments	Needs approximately 5 months of cold moist stratification. In Alaska, seed is sown in the Fall and overwintered where it's exposed to outside ambient temperatures. Soil: Upland, well-drained, calcium-rich preferred (but not necessary) (2, 4)
Growing Area Preparation / Annual Practices for Perennial Crops	Seed containers are moved into the greenhouse in Spring for germination; then moved to the lathhouse after several true leaves appear (4)
Establishment Phase Details	Requires cold stratification. Sow in Fall for germination in following Spring (4)
Length of Establishment Phase*	4 weeks (10)
Active Growth Phase*	After seedlings have been established, plants develop rapid shoot and root growth 2-4 weeks after germination. Plants are fertilized with 20-20-20 liquid NPK at 100 ppm weekly during growing season. (10)
Length of Active Growth Phase*	12 weeks (10)
Hardening Phase*	Plants are fertilized with 10-20-20 liquid NPK at 200 ppm in early fall. Containers are leached with water. Irrigation is gradually reduced through Sep-Oct (10)
Length of Hardening Phase*	4 weeks
Harvesting, Storage and Shipping*	Seeds are collected into paper or cloth bags (no plastic). After seed has been harvested, it is dried, cleaned, and stored (2) Overwinter in outdoor nursery under insulating foam cover and snow (10)
Length of Storage*	5 months
Guidelines for Outplanting / Performance on Typical Sites*	Seedlings outplanted first year in July and August (10)
Other Comments	None

Date Protocol Created or Updated	05/14/2024
*Indicates a reference plant and protocol were used. For my reference, I chose <i>Arnica cordifolia</i> due to its similarity in characteristics to <i>Arnica frigida</i> . Not only do these species shares similar morphological traits but they also have comparable growth patterns, and they grow in similar environments (both species tolerate foothills – subalpine climates).
