Non-referential NPs, Expletives, and Extraposition

Overview

- Existentials
- Extraposition
- Idioms

Where We Are, and Where We're Going

- Last time, we met the passive *be*.
- Passive *be* is just a special case -- that *be* generally introduces [PRED +] constituents (next slide).
- Today, we'll start with another *be*, which occurs in existential sentences starting with *there*, e.g. *There is a monster in Loch Ness*.
- Then we'll look at this use of *there*.
- Which will lead us to a more general examination of NPs that don't refer, including some uses of *it* and certain idiomatic uses of NPs.

Chapter 10 entry for be

```
be-lxm
              SEM
SEM
```

Copula (generalized)

```
be-lxm
\begin{bmatrix} ARG-ST & \left\langle \boxed{1}, \begin{bmatrix} SYN & \left[ HEAD & \left[ PRED + \right] \\ VAL & \left[ SPR & \left\langle \boxed{1} \right\rangle \\ COMPS & \left\langle \right\rangle \end{bmatrix} \right] \end{bmatrix}
                                                                                          \begin{bmatrix} INDEX & s \end{bmatrix}
  SEM
```

Existentials

- The be in There is a page missing cannot be the same be that occurs in sentences like Pat is tall or A cat was chased by a dog. Why not?
- So we need a separate lexical entry for this *be*, stipulating:
 - Its SPR must be there
 - It takes two complements, the first an NP and the second an AP, PP, or (certain kind of) VP.
 - The semantics should capture the relation between, e.g. *There is a page missing* and *A page is missing*.

Lexical Entry for the Existential be

```
\left\langle \text{be ,} \begin{bmatrix} \text{exist-be-lxm} \\ \text{ARG-ST } & \left\langle \begin{bmatrix} \text{NP} \\ \text{FORM there} \end{bmatrix}, \begin{bmatrix} 2 \\ 2 \\ \end{bmatrix}, \begin{bmatrix} \text{PRED } + \\ \text{VAL } & \left[ \begin{array}{c} \text{SPR } & \left\langle \begin{bmatrix} 2 \\ 2 \\ \end{array} \right) \\ \text{COMPS } & \left\langle \right\rangle \end{bmatrix} \right] \right\rangle \right\rangle
\left\langle \text{SEM } \begin{bmatrix} \text{INDEX } s \\ \text{RESTR } & \left\langle \right\rangle \end{bmatrix} \right|
```

Questions About the Existential be

- What type of constituent is the third argument?
- Why is the third argument [PRED +]?
- Why is the second argument tagged as identical to the SPR of the third argument?
- What is the contribution of this *be* to the semantics of the sentences it occurs in?
- Can all [PRED +] predicates appear as the third argument in existentials?
- How do we rule out **There was a greyhound a good runner*?

$$\left\langle \text{be ,} \begin{bmatrix} \text{exist-be-lxm} \\ \text{ARG-ST } \left\langle \begin{bmatrix} \text{NP} \\ \text{FORM there} \end{bmatrix}, \boxed{2}, \begin{bmatrix} \text{PRED } + \\ \text{VAL } \begin{bmatrix} \text{SPR } & \left\langle \boxed{2} \right\rangle \\ \text{COMPS } & \left\langle \right\rangle \end{bmatrix} \right\rangle \right\rangle \right\rangle$$

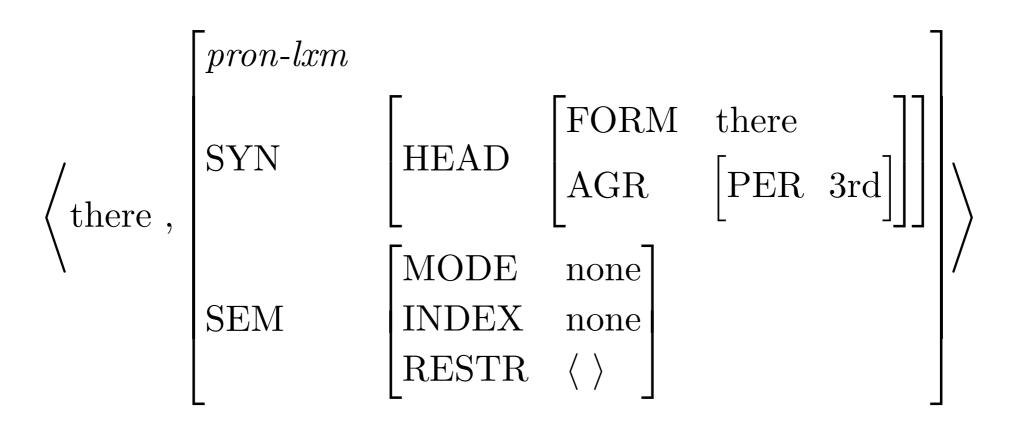

$$\left\{ \text{SEM } \begin{bmatrix} \text{INDEX } s \\ \text{RESTR } & \left\langle \right\rangle \end{bmatrix} \right\}$$

The Entry for Existential there

	$\lceil pron$ - lxm					
\langle there ,	SYN	HEAD	FORM	there		
			AGR	PER	3rd	
	SEM	[MODE	none	L	- <u>-</u> -1-1	
		INDEX	none			
		RESTR	$\langle \ \rangle$			

Questions About Existential there

- Why do we call it a pronoun?
- Why don't we give it a value for NUM?
- What does this entry claim is *there*'s contribution to the semantics of the sentences it appears in? Is this a correct claim?

Other NPs that don't seem to refer

- It sucks that the Rockies lost the series.
- It is raining.
- Andy took advantage of the opportunity.
- Lou kicked the bucket.

What we need to deal with examples like *It follows that you are wrong*

- A lexical entry for this dummy it
- An analysis of this use of *that*
- Entries for verbs that take clausal subjects (as in *That you are wrong follows*)
- A rule to account for the relationship between pairs like *That you are wrong follows* and *It follows that you are wrong*

The Entry for Dummy it

Questions About Dummy it

- How does it differ from the entry for dummy *there*? Why do they differ in this way?
- Is this the only entry for *it*?

	$\lceil pron$ - lxm				
$\left\langle \mathrm{it}, ight.$	SYN	HEAD	FORM AGR	[att]	\
	SEM	MODE	none	_	
		INDEX	none		
		RESTR	$\langle \ \rangle$		

A New Type of Lexeme: Complementizers

	SYN	HEAD VAL	$egin{bmatrix} comp \ AGR & 3sing \end{bmatrix} \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ $
comp- lxm :	ARG-ST	$\left\langle \begin{bmatrix} S \\ INDEX \end{bmatrix} \right\rangle$	$s \bigg] \bigg\rangle$
	SEM	INDEX RESTR	$\begin{bmatrix} S \\ \langle \ angle \end{bmatrix}$

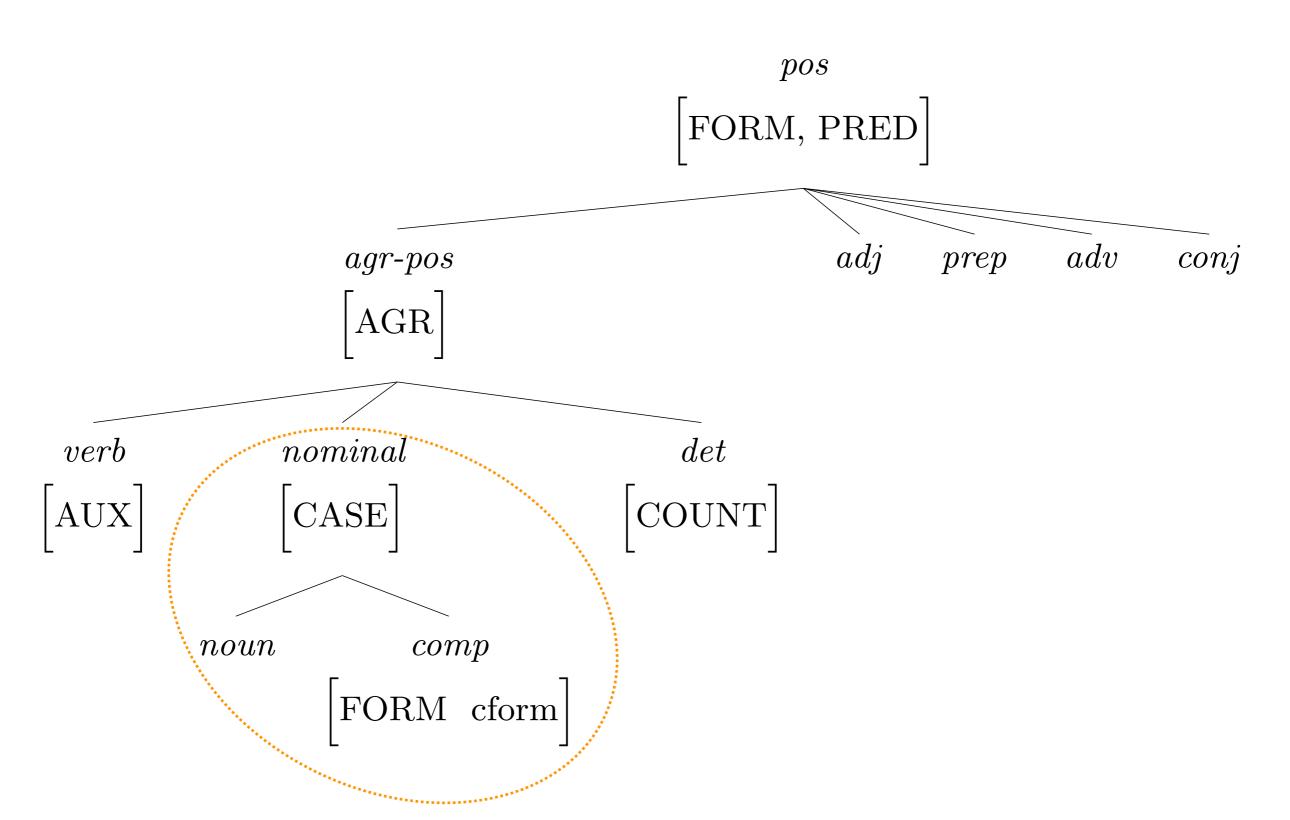

Questions About the Type comp-lxm

- Why does it stipulate values for both SPR and ARG-ST?
- Why is its INDEX value the same as its argument's?
- What is its semantic contribution?

$$comp-lxm: \begin{bmatrix} SYN & \begin{bmatrix} HEAD & \begin{bmatrix} comp \\ AGR & 3sing \end{bmatrix} \\ VAL & \begin{bmatrix} SPR & \langle \ \rangle \end{bmatrix} \end{bmatrix} \end{bmatrix}$$

$$SEM \begin{bmatrix} INDEX & s \\ RESTR & \langle \ \rangle \end{bmatrix}$$

The Type comp

The Lexical Entry for Complementizer that

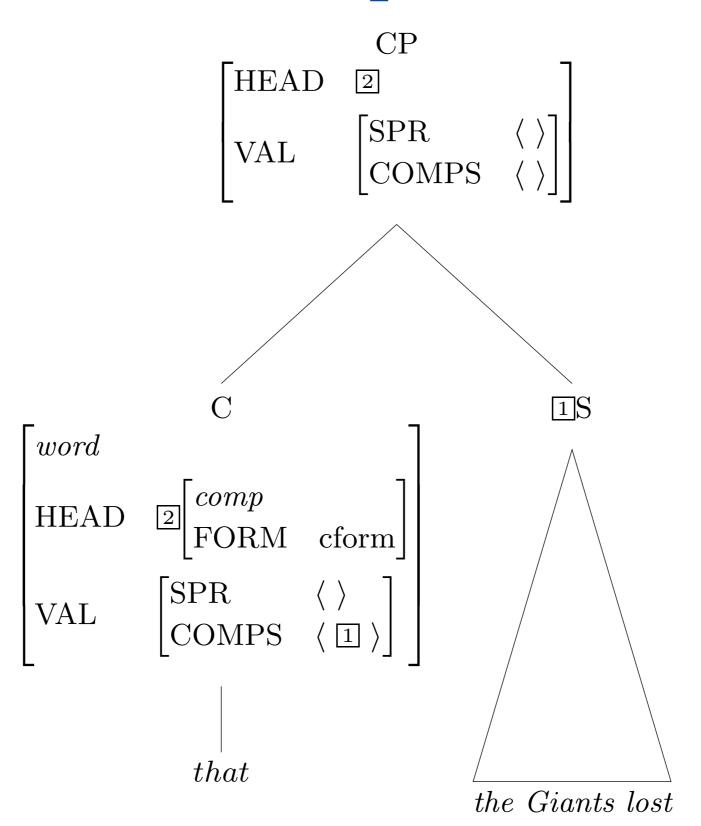

$$\left\langle \text{that}, \begin{bmatrix} comp\text{-}lxm \\ ARG\text{-}ST & \left\langle \begin{bmatrix} FORM \text{ fin} \end{bmatrix} \right\rangle \\ SEM & \begin{bmatrix} MODE \text{ prop} \end{bmatrix} \end{bmatrix} \right\rangle$$

...and with inherited information filled in

$$\left\langle \text{that} \right. \left\{ \begin{array}{l} \text{Comp-lxm} \\ \text{SYN} \end{array} \right. \left[\begin{array}{l} \text{HEAD} & \begin{bmatrix} \text{comp} \\ \text{FORM} & \text{eform} \\ \text{AGR} & 3\text{sing} \end{bmatrix} \right] \\ \text{VAL} & \left[\begin{array}{l} \text{SPR} & \left\langle \right\rangle \right] \end{array} \right] \\ \left\{ \begin{array}{l} \text{ARG-ST} & \left\langle \begin{bmatrix} \text{FORM} & \text{fin} \\ \text{INDEX} & s \end{bmatrix} \right\rangle \\ \text{SEM} & \begin{bmatrix} \text{MODE} & \text{prop} \\ \text{INDEX} & s \\ \text{RESTR} & \left\langle \right\rangle \end{array} \right] \\ \end{array} \right.$$

Question: Where did [FORM cform] come from?

Structure of a Complementizer Phrase

Sample Verb with a CP Subject

$$\left\langle \text{matter}, \begin{bmatrix} siv\text{-}lxm \\ \text{ARG-ST} & \left\langle \begin{bmatrix} \text{SEM [INDEX 1]} \end{bmatrix} \right\rangle \\ \text{SEM} & \begin{bmatrix} \text{INDEX } s \\ \\ \text{RESTR} & \left\langle \begin{bmatrix} \text{RELN} & \text{matter} \\ \text{SIT} & s \\ \\ \text{MATTERING} & 1 \end{bmatrix} \right\rangle \end{bmatrix} \right)$$

Note: the only constraint on the first argument is semantic

A Problem

- We constrained the subject of *matter* only semantically. However...
 - CP and S are semantically identical, but we get: That Bush won matters vs. *Bush won matters
 - Argument-marking PPs are semantically identical to their object NPs, but we get:

The election mattered vs. *Of the election mattered

• So we need to add a syntactic constraint.

• S and PP subjects are generally impossible, so this constraint should probably be on *verb-lxm*.

The Extraposition Lexical Rule

- Why is the type *pi-rule*?
- Why doesn't it say anything about the semantics?
- Why is the COMPS value A, not < >?

Extraposition with Verbs whose COMPS Lists are Nonempty

- It worries me that war is imminent.
- It occurred to Pat that Chris knew the answer.
- It endeared you to Andy that you wore a funny hat.

Another Nonreferential Noun

	$\lceil massn$ - lxm				
$\langle advantage ,$	SYN	HEAD	FORM AGR	$\begin{bmatrix} advantage \\ 3sing \end{bmatrix}$	
		MODE	none		//
	SEM	INDEX	none		
		RESTR	()		

The Verb that Selects advantage

	$\int ptv$ - lxm				
\langle take,	ARG-ST	$\left\langle \mathrm{NP}_{i}\right\rangle ,$	[FORM advantag	[FORM INDEX	$\left. \begin{array}{c} \text{of} \\ j \end{array} \right] \right\rangle$
		INDEX	S		
	SEM	RESTR	RELN SIT EXPLOITER EXPLOITED	$\left. egin{array}{c} \mathbf{exploit} \ s \ i \ j \end{array} ight] angle$	

Our analyses of idioms and passives interact...

We generate

Advantage was taken of the situation by many people. Tabs are kept on foreign students.

- But not:
 - Many people were taken advantage of.
- Why not?

Overview

- Existentials (there, be)
- Extraposition (that, it, LR)
- Idioms
