# Knowledge Engineering for NLP April 3, 2006 Test suites

#### Overview

- General announcements
- LKB Formalism con't
- Evaluation in computational linguistics
- Uses of test suites
- Evaluating precision grammars
- Levels of adequacy
- Test suite software ([incr tsdb()] demo)
- Time for questions about lab 2

#### Ask more questions!!

- About: lab instructions, phenomena in your language, the Matrix, the LKB, HPSG
- Who's using the FAQ?
- Who spent > 10 minutes figuring out an LKB error?

# Evaluation and computational linguistics

- Why is evaluation so prominent in computational linguistics?
- Why is it not so prominent in other subfields of linguistics?
- What about CS?

#### Uses of testsuites

- How far do I have left to go?
  - Internal metric
  - Objective comparison of different systems
    - → How do you evaluate precision grammars?
- Where have I been?
  - Regression testing
  - Documentation

#### Kinds of test suites

- Hand constructed
  - Controlled vocabulary
  - Positive and negative examples
  - Controlled ambiguity
- Corpus based
  - More open vocabulary
  - Greater ambiguity
  - Haphazard ungrammatical examples
  - Application-focused
- Which kind for which use?

## Evaluating precision grammars

- Coverage against a corpus
  - Which corpus?
  - Challenges of lexical acquisition
- Coverage of phenomena
  - How does one choose phenomena?
  - What did TSNLP do?
- Comparison across languages

# Levels of adequacy (1/2)

- grammaticality
- "right" structure
- "right" dependencies
- exact match semantics

## *Levels of adequacy (2/2)*

- Only legitimate parses (how do you tell?)
- Some set of parses including the preferred one
- Preferred parse only/first
- Preferred parse within first N

## Test suite software

- What does the LKB batch parse utility do?
- What else would you like it to do?
- $\rightarrow$  [incr tsdb()] demo

#### Overview
