## Languages - mapped

lat/long data mostly from wals.info; map by batchgeo.com

## Languages - cupcaked

## Grammar coverage (shared)

- Basic word order
- Case
- Agreement
- Personal pronouns
- Tense/aspect
- Sentential negation
- Argument optionality
- Matrix yes-no questions
- Coordination
- Modification (adjective, adverb)
- Non-verbal predicates
- Clausal complements
- Wh questions
- Possessives

## Set up

- Transfer-based MT: Grammars parse and generate, mapping surface strings to semantic representations in MRS
- Grammars developed on the basis of the Grammar Matrix, facilitating harmonized semantic representations
- Quasi lexical interlingua (English lemmatas as PRED values)
- 'semi' (Semantic Interface) maps variable properties (PNG, TAM, COG-ST, INFO-STR) from grammar internal space to interlingual space. Lossy mapping, provides defaults
- One 'accommodation’ transfer grammar per language, instantiating shared transfer rules

## MMT with ACE

- Faster system run times
- More coverage (fewer system timeouts)
- Compatible with Condor (yay!)
- Possibility of respecting ICONS representation of information structure

## Input sentences
