1a. Write a 2-3 line situation similar to what a Public Health Laboratory would have. Include some epidemiological, microbial, and/or typing information similar to what you have had for the homework. The situation you describe should benefit from using one or more of the subtyping methods discussed in class.

1b. Then write 1 question, along with your answers to the question, about which subtyping method or methods would should be used.

2a. Write a 2-3 line situation as in question 1a but in this scenario no subtyping method is advisable.
